Furia Ninja

Milestone 2 review report: core game data (update with the recovered texts)

Delivered for client review. Milestone 2 is not closed until you have reviewed and accepted it.

Summary

The texts that were missing from the first export have now arrived and are loaded: the English and Spanish ability descriptions of 58 Assaulters, and the Spanish text of the first 16 Supporters. Every Assaulter now has its ability text, and the first 16 Supporters have both languages next to each other. Nothing was invented; each line comes from the supplied files and was checked against them.

Still not complete: the rest of the Supporters channel has not been collected, and there is no equipment, jewelry or gem material. So the initial game content must not be treated as fully imported.

Numbers after the import

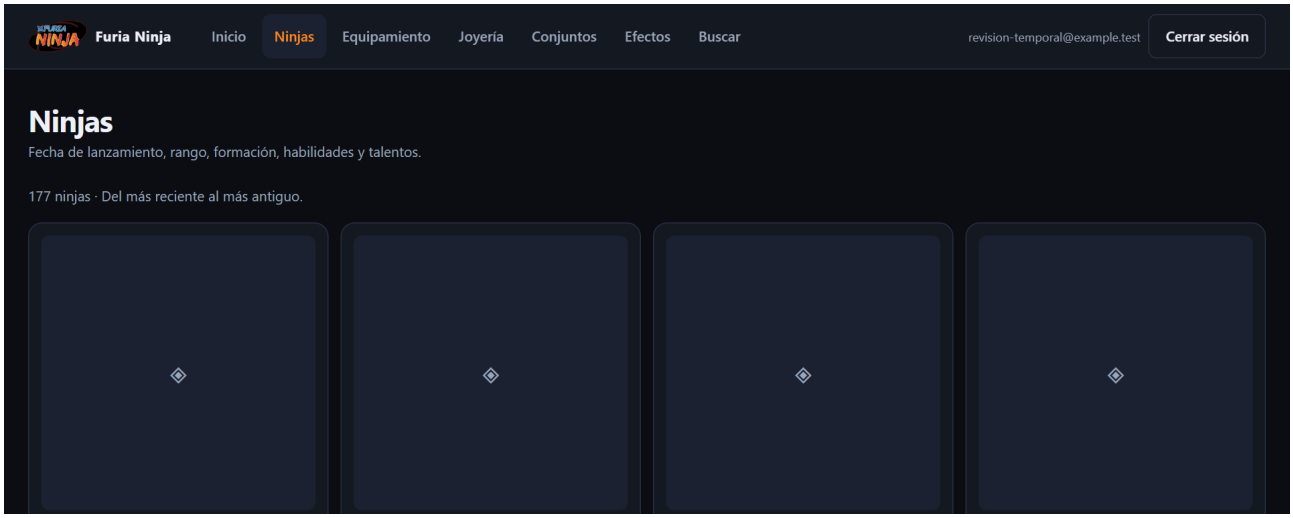

What	Count
Ninjas in the database	177 (167 from the release list, 10 Alien Ninjas)
With a full card (rating, formation, type, 4 stats)	113 (112 from the packages plus Uchiha Madara (Moon's Eye) from the first delivery)
With ability text turned into effects	115 (was 57)
Assaulters with ability text	60 of 60 (58 recovered, 2 already supplied)
Effects stored	2,781: 2,510 structured, 59 to review, 212 kept as source text
Effect lines with supplied Spanish next to the English	2,622
Awakening stages stored / ninjas with awakenings	69 / 51
Release list ninjas with only a name and a date	61
Equipment, jewelry and gems	0 (no material received)

How the numbers add up

The packages hold 121 source entries. Four could not be identified and are kept aside without creating a ninja, which leaves 117. Two ninjas were posted in two channels (Six Paths Sage, Cursed Seal Sasuke) and are stored once, giving 115 distinct ninjas: 105 from the release list and 10 Alien Ninjas. The 113th card is Uchiha Madara (Moon's Eye), loaded in the first delivery; the 112 other cards are in the new packages. Earlier records were updated in place and no ninja was duplicated.

The ninja list

Newest first, with rating and formation on each card.

Real capture of the running application, signed in.

Spanish next to the English original

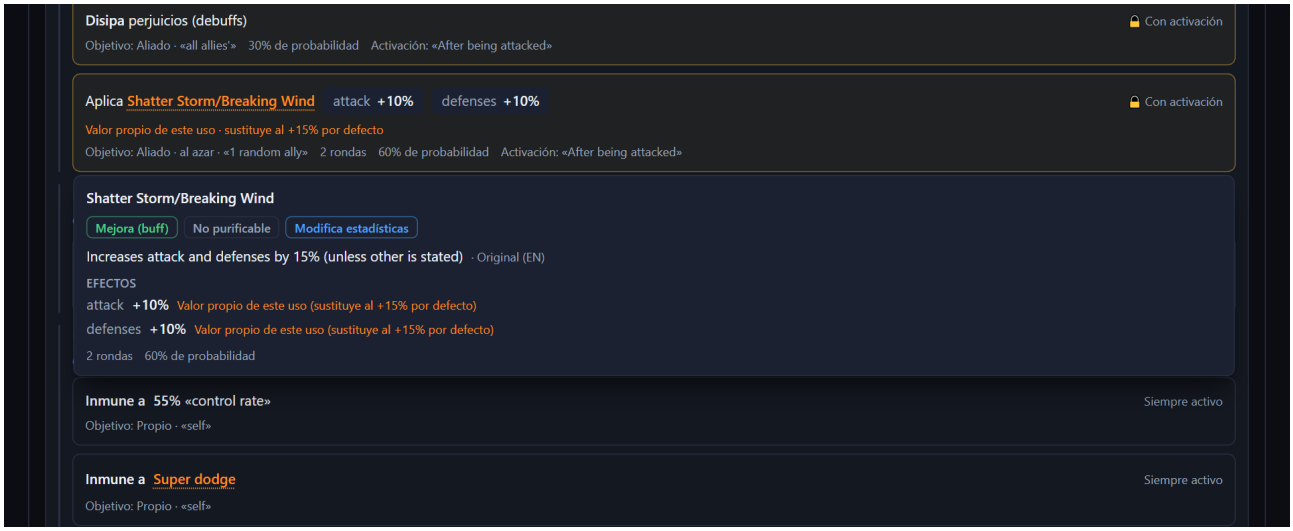

Each ability line shows the supplied Spanish and, below it, the English original. Angel Konan is one of the first 16 Supporters whose Spanish was recovered.

Angel Konan: the skill with both languages. The rows below each line are the structured effects.

Per-ninja values (your Shatter Storm example)

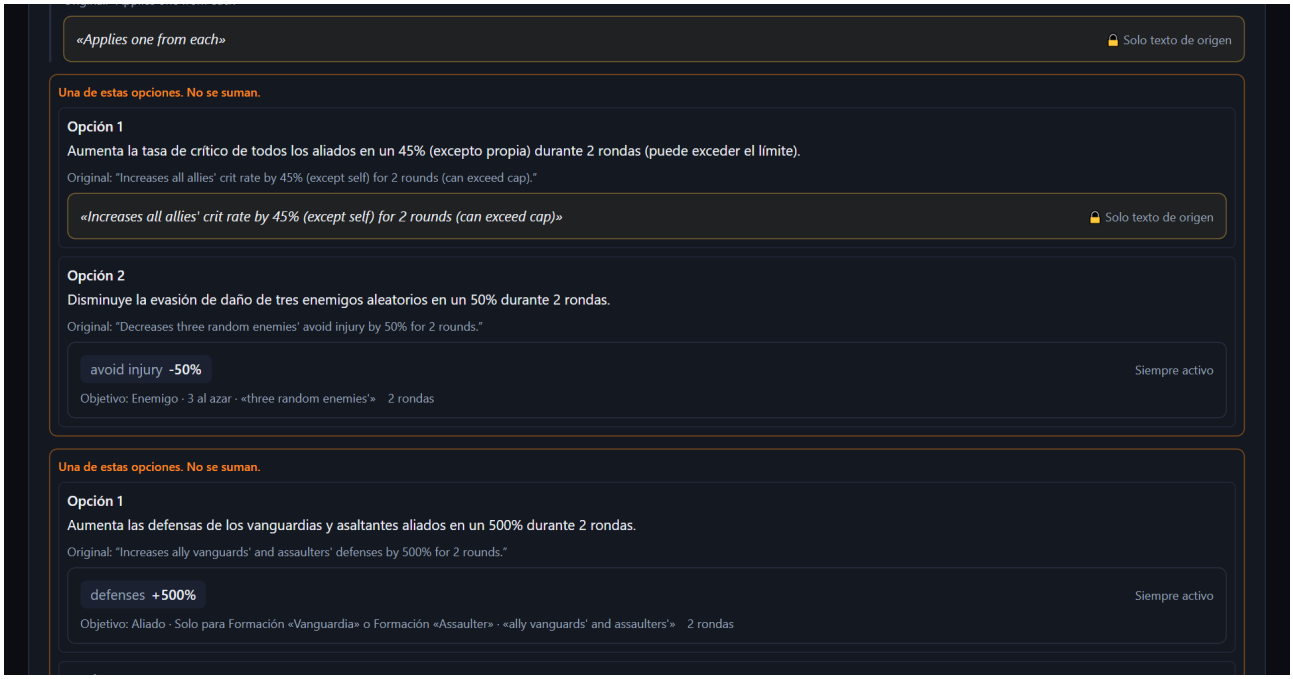

The default Shatter Storm value is 15%. When the ninja's text has a percentage in brackets, that value replaces the default for that ninja only. For Sai it is 10%, and the chance (60%) and the duration (2 rounds) are stored separately.

Sai (Errant Knight): the tooltip shows this ninja's own values. The dictionary default does not change.

Alternatives are never added together

Hiruko's skill says it applies one from each group. The three groups of two stay three boxes of alternatives, with nothing chosen by default.

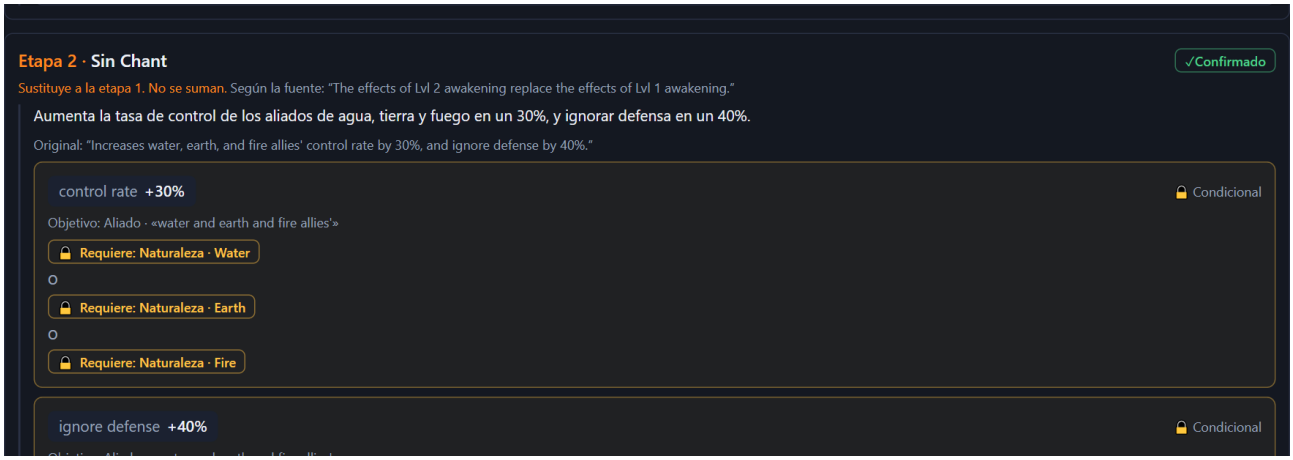

Hiruko: three groups, each marked as one of these options.

Awakenings

Each stage is stored on its own. Four rules are stated in the supplied material and are now applied; the other 65 stages stay unknown and are never added together.

Ninja	Rule	Status
Hinata (Soccer Star)	Level 2 replaces Level 1	Stored
Kusanagi Kyo	Level 2 replaces Level 1	Stored (source note in both languages)
First Hokage	Level 3 cancels Level 2	Stored. The text calls him Shodai Hokage; it was linked by position 44 and the name in the manifest, and the name is kept as reviewed
Sage Jugo	Special card awakening restates base values (83% to 86%)	Stored
All other awakenings (65)	Not stated	Unknown, shown separately

Kusanagi Kyo: level 2 replaces level 1

Level 2 says it replaces level 1 and quotes the source; level 1 is shown as no longer applying.

First Hokage: level 3 cancels level 2

Level 2 is marked as no longer applying once level 3 is unlocked.

What is still missing, stated plainly

Missing source data and text that has not been imported are different things. Today the first group is the only one left:

Item	Situation
Rest of the Supporters channel	Not collected. The number of Supporters left is not known.
Spanish for Guren and Final Sasuke	Not supplied.
Cards for Might Guy and Sasuke (Taka)	Not supplied. Their ability text is stored; rating, formation, type and stats are empty.
Equipment, jewelry, gems	No material received. The Gems section stays hidden.
Nature of each ninja, Tank or DPS	Not in the sources. Nothing was inferred.
The recovered texts	They are transcriptions pending an exact comparison against the original messages.

Questions for you

#	Question
1	Cards call the middle position "Assaulter" and you call it "Center". Are they the same? Until you confirm, Center's rules are not applied.
2	We matched five names by evidence: The Seventh Hokage = 7th Hokage, Ay-Bee Combo = A-B Combo, Might Gai = Might Guy, Nadeshiko Shizuka = Shizuka, 10-Tailed Obito = 10-Tails Obito. Plus First Hokage = Shodai Hokage. Do you confirm?
3	We could not identify Immortal Madara, Neji Hyuga, Illusion God Itachi or Nagato uzumaki. Who are they?
4	English and Spanish disagree in 21 ninjas (different numbers, different wording or a different number of lines). We keep both and flag it. Which is right?
5	Are Power and Chakra the same attribute? Is s.attack strategy attack? We store them as written.
6	Where the English leaves a stat without a number (for example agility) and the Spanish gives it one, which is correct?

Checks run after the import

Check	Result
Automated tests	182 pass
Type check, style check, production build	clean
Second load of the same data	creates and changes nothing
Database integrity and foreign keys	ok
Backup before the import	done
Access without signing in	redirects to the login
Phone width	no sideways scrolling

Milestone 2 is not considered closed until you review it, accept it and the milestone payment is completed.
