Furia Ninja

Milestone 4 final report: the application is live

Delivered for client review. Milestone 4 is not closed until you have reviewed it and accepted it.

Your website

The application is online at **https://furia-ninja.vercel.app**. It is private: visitors who are not signed in are sent to the sign-in page, and only the administrator can change anything. Every screenshot in this report was taken from that live website.

What	Where it stands
Live website	Online and checked from the outside over a secure connection
Ninja data	177 ninjas, 79 Supporter cards, 175 full character cards, English text for every ninja
Spanish	Interface complete. 174 ninjas fully in Spanish, 1 partly (Sai), 2 waiting (Guren, Final Sasuke)
Your corrections	All applied, including the rule that each new awakening replaces the previous one
Search, filters, sorting, details, administration	Working on the live site
Phone, tablet, desktop	Checked on all of them
Equipment, jewelry and gems	Ready but empty: waiting for your source material. Nothing was invented
First administrator account	Ready: a private one-time page where you choose your own e-mail and password (see the last page)

How it is built

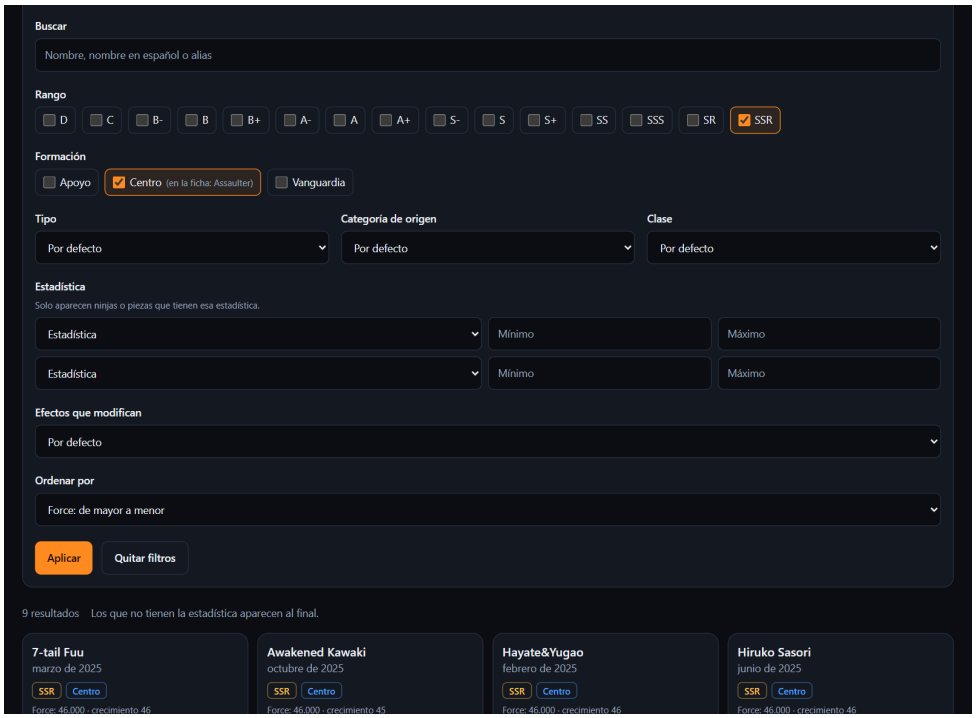

Part	What it is
Hosting	Vercel, in your own team (FURIA NINJA). The code comes from the project repository.
Database	Neon PostgreSQL, a managed online database, on its free plan. A second, separate database serves test versions, so a test can never touch your real data.
Security	Sessions are protected, private pages are never cached, the connection is encrypted, passwords are stored encrypted, and nothing secret is kept in the code.
Cost	Nothing extra was started. The database uses the free plan.

Your corrections, and how they are applied

Your decision	What the application does
Each new awakening replaces the previous one	Applied to every talent and skill. The page says so, and the effects are never added together
Natsu Dragneel, Cursed Tayuya, Kusanagi Kyo, First Hokage, Hinata, Sage Jugo	Their special rules are kept exactly
Shodai Hokage is the First Hokage	One ninja, found by both names
Kimono Kurenai	Her Spanish text is complete, with the last line you sent
Center = Assaulter, 15 ranks, Power, Chakra, Force, S. Attack, English first	Applied and tested
Three cards print a five digit HP (Anko 45000, Hikari 46000, Isshiki 38000)	Kept exactly as printed until you confirm

Search and filters on the live site

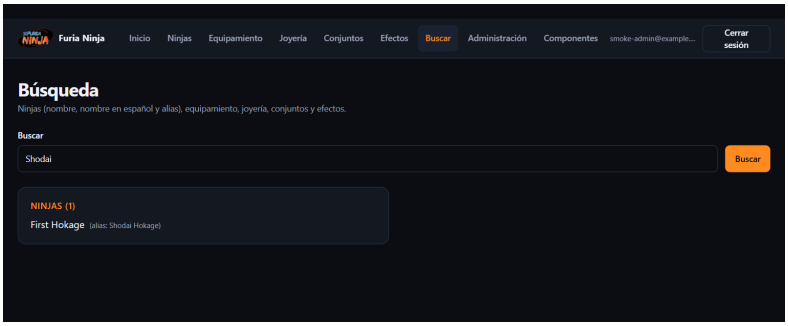

Rank SSR and Center formation, sorted by Force from highest to lowest.

Nine results.

Searching by another name

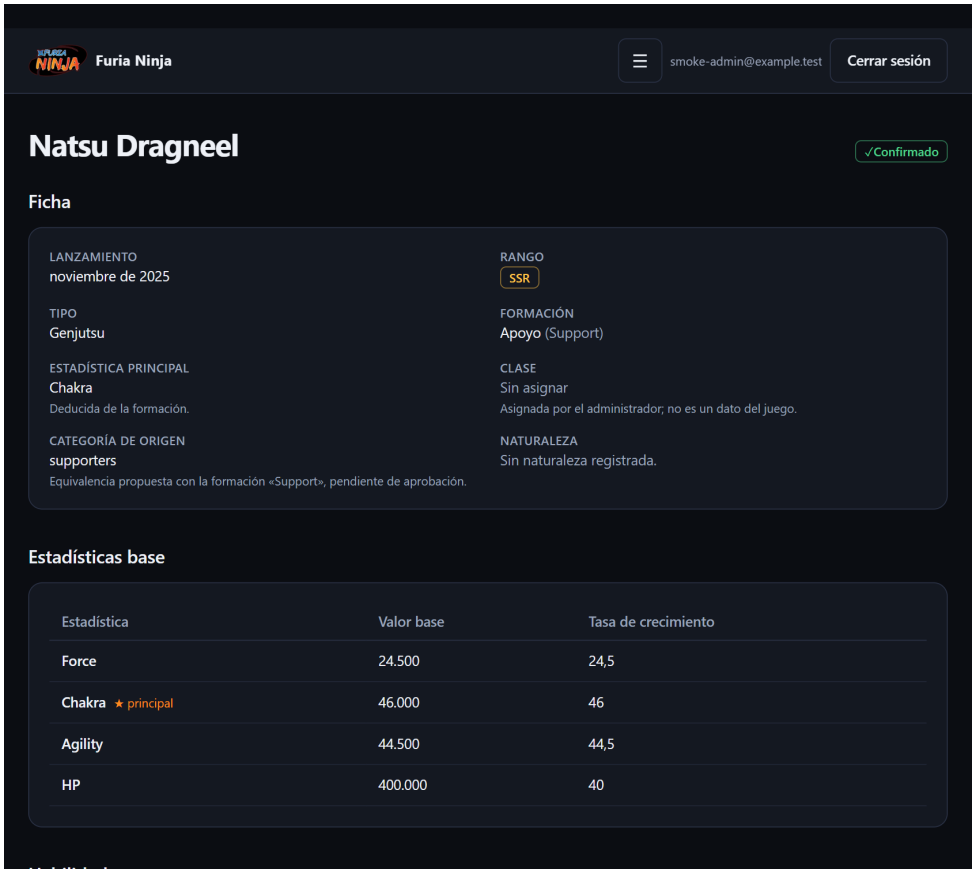

Searching Shodai finds First Hokage.

The result shows which name matched.

Natsu Dragneel

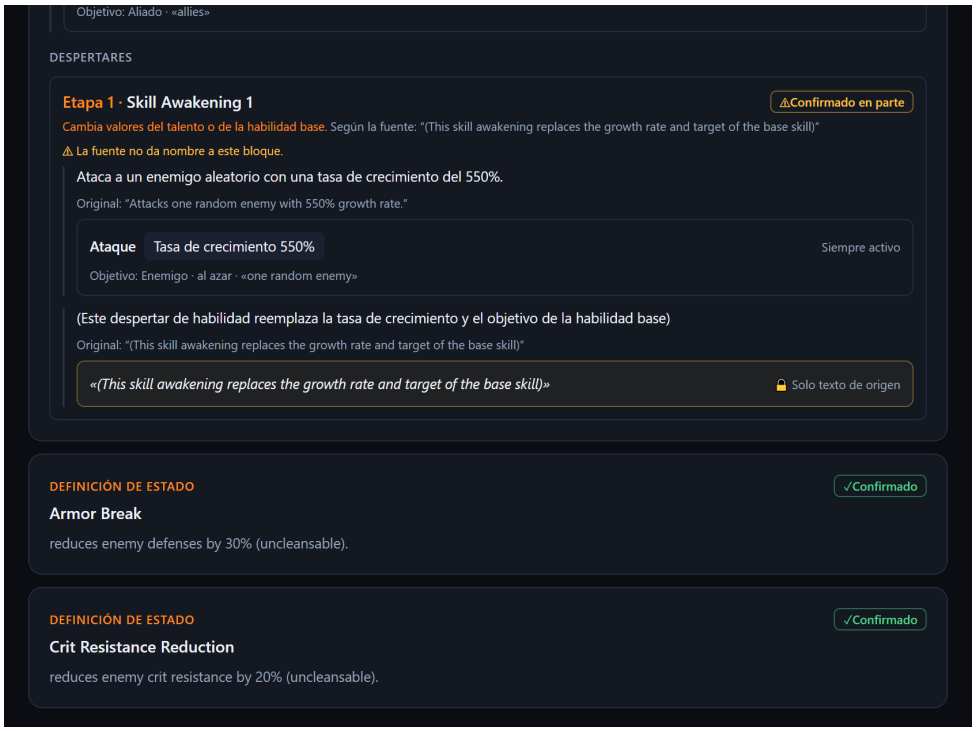

The card, the base skill and the talent, with the original line next to each effect.

Rank SSR with its four attributes.

Skill awakening

It replaces the target and growth rate of the base skill and nothing else.

One random enemy at 550%.

Talent level 2

Level 2 replaces level 1, and the source line is quoted.

Stage 2: Fire Dragon's Talon.

Cursed Tayuya

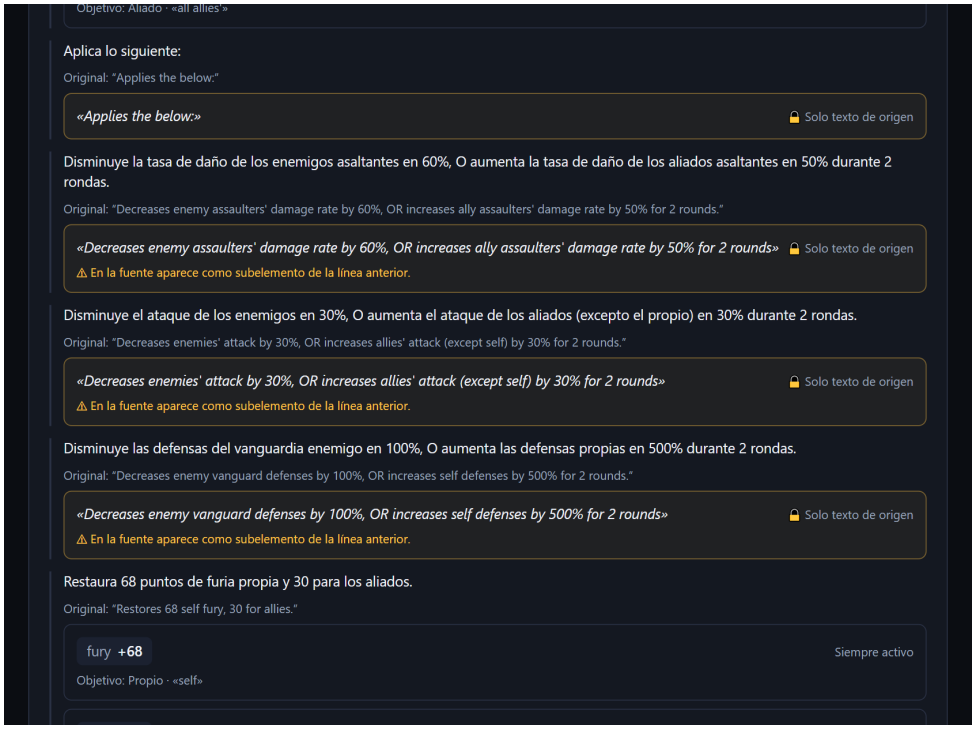

The special awakening replaces the values it restates.

Speed 88% to 92% and the other replaced values.

Kimono Kurenai: complete Spanish

The three choices stay alternatives. The Spanish text ends with the line you sent.

The three choices and the fury line.

The general replacement rule

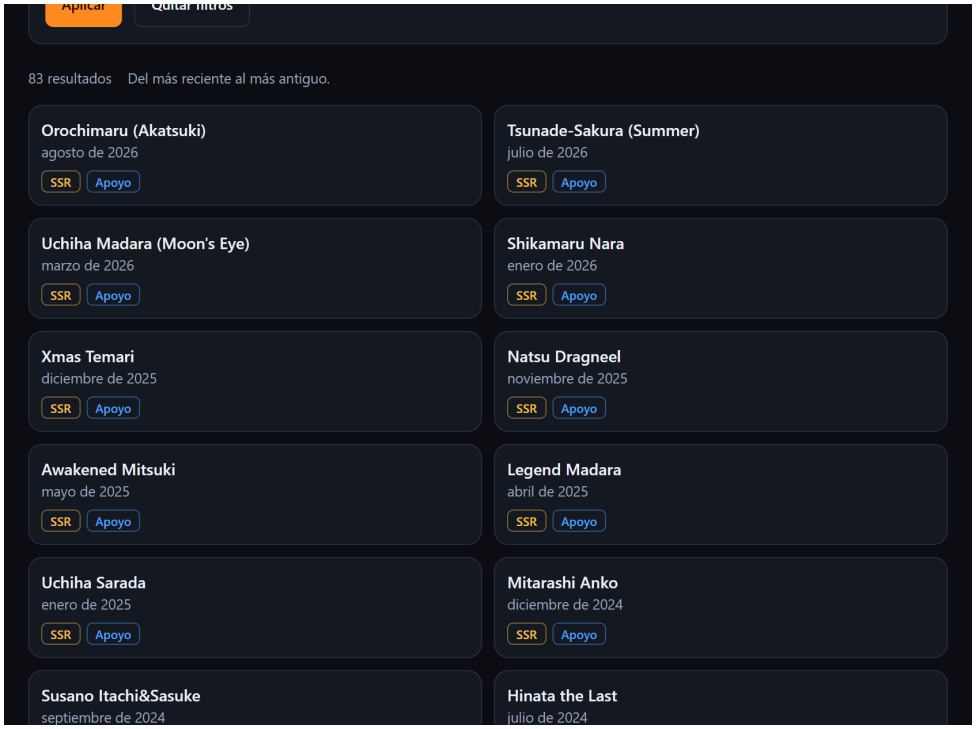

Yamanaka Ino, awakening 2: it replaces awakening 1 because of your decision.

The page states the rule and its reason.

The Supporters

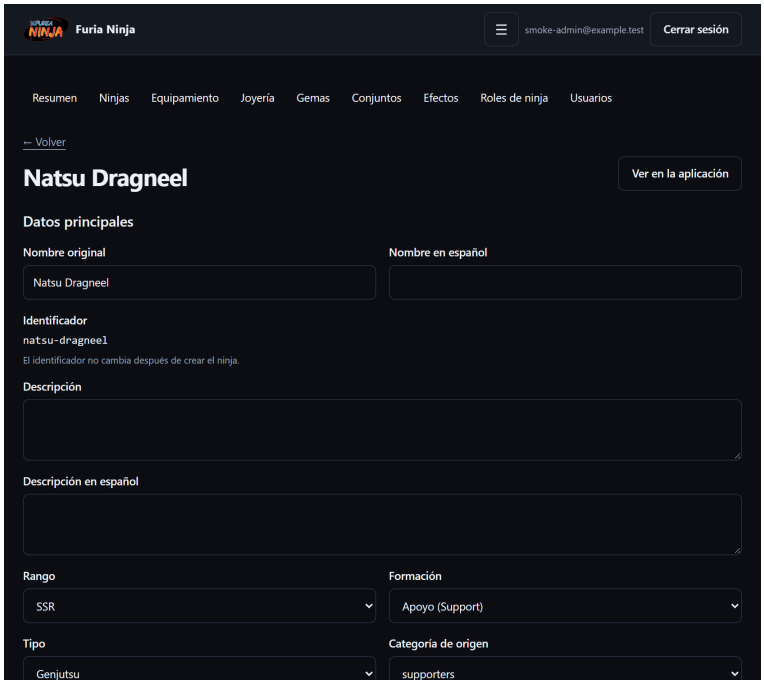

The Support formation lists 83 ninjas: the 79 Supporters plus 4 Alien cards that also print Support.

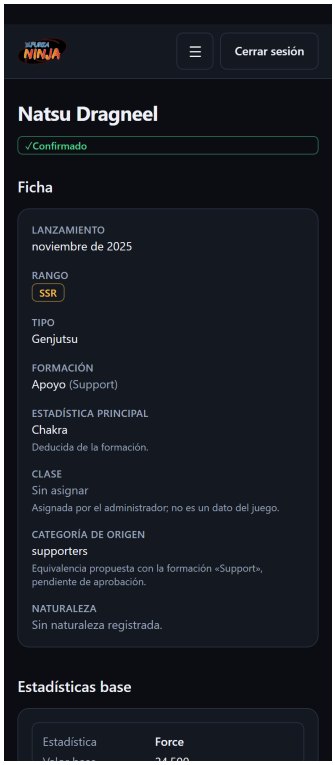

The Supporters in the ninja list.

Administration and phone

Only administrators can open the administration: names, rank, formation, statistics, other names and the text of talents, skills and awakenings. On a phone (390 px) no page scrolls sideways.

Left: the administrator edit page on the live site. Right: Natsu Dragneel on a phone.

How the data was moved and checked

Check	Result
Database copy	All 41 tables copied to the online database in one all-or-nothing step. Every table was compared row by row with the original: all identical (9,074 rows)
Safety	The copy refuses to write into a database that already has data, and the original database file is untouched and backed up
Test versions	A separate database was loaded and fully tested first: 165 checks in a real browser over the internet, all passing
Automated tests	274 tests on the local database format (273 pass, 1 skipped by design) and 274 on PostgreSQL (267 pass, 7 skipped because they only apply to the local format). None failed
Live website checks	37 of 37 checks passed, repeated after the final release: secure connection, sign-in, access rules, search, your corrections visible, phone width, and the temporary test accounts removed afterwards with no game data changed
Data survives releases	A test record written before the final release was still there after it. The live data is identical to the original in all 41 tables
Backup and restore	A complete backup of the live database was restored on a clean server and matched table by table. The restore refuses to write into a database that already has data
First administrator	The private setup page was tested end to end on a test version: it is hidden without the private link, accepts only your own e-mail and a password of 12 or more characters, creates exactly one administrator, then closes for everyone

Security results

Question	Answer on the live site
Can a visitor who is not signed in see the data?	No. They are sent to the sign-in page
Can a regular user manage the database?	No. The administration answers as if it did not exist, and every change is refused
Is the sign-in protected?	Yes. The session cookie is secure and hidden from page scripts, and the connection is encrypted
Is private data cached publicly?	No
Are Gems visible?	No, hidden as agreed
Are there test or default accounts?	None remain. The database has no accounts until the real administrator is created

What is still open

Item	What we need
First administrator account	Open the private link we send you, type your e-mail and choose your password yourself. Nobody else sees it
Equipment, jewelry and gems	Your source material. Nothing was invented
Cards for Might Guy and Sasuke (Taka)	The two cards
Spanish for Guren, Final Sasuke and the end of Sai's text	The Spanish text or screenshots
Nagato Uzumaki	The screenshots for its rating and position

Questions for you

#	Question
1	Illusion God Itachi is the same character as which ninja?
2	Who are Neji Hyuga (old entry) and Immortal Madara?
3	Are the six name matches right? (listed in the earlier reports)
4	Are the HP values 45000, 46000 and 38000 correct, or is a digit missing?
5	Shikamaru Nara: Explosive Shadow Stab (card) or Shadow Fang (text)?
6	Does a first awakening add to the base talent or skill, or replace part of it?

Handover

You receive the source code (the project repository), the reports of every milestone, a handover guide with the commands to run, back up and update the site, and the data audit files. Private material such as your card screenshots is not part of the website and is not online.
