# Furia Ninja

**Milestone 4 final report: the application is live, with search by effect**

Delivered for your review. Milestone 4 is not closed until you have reviewed it and accepted it.

## Your website

The application is online at **https://furia-ninja.vercel.app**. It is private: visitors who are not signed in are sent to the sign-in page, and only the administrator can change anything. Every screenshot in this report was taken from the live website.

| What | Where it stands |
|---|---|
| Live website | Online and checked from the outside over a secure connection, on 27 October 2026 |
| New: search by effect | Live. A new field, **Buscar por efecto**, finds ninjas by a specific effect such as aturdir, curación, velocidad or inmunidad. It works together with every other filter |
| Ninja data | 177 ninjas, 79 Supporter cards, 175 full character cards, English text for every ninja, 4,395 stored effects |
| Spanish | Interface complete. 174 ninjas fully in Spanish, 1 partly (Sai), 2 waiting (Guren, Final Sasuke) |
| Your earlier corrections | All applied, including the rule that each new awakening replaces the previous one |
| Search, filters, sorting, details, administration | Working on the live site |
| Phone, tablet, desktop | Checked on all of them |
| Equipment, jewelry and gems | Ready but empty: waiting for your source material. Nothing was invented |
| Your administrator account | Created by you. The one-time setup page is now closed |

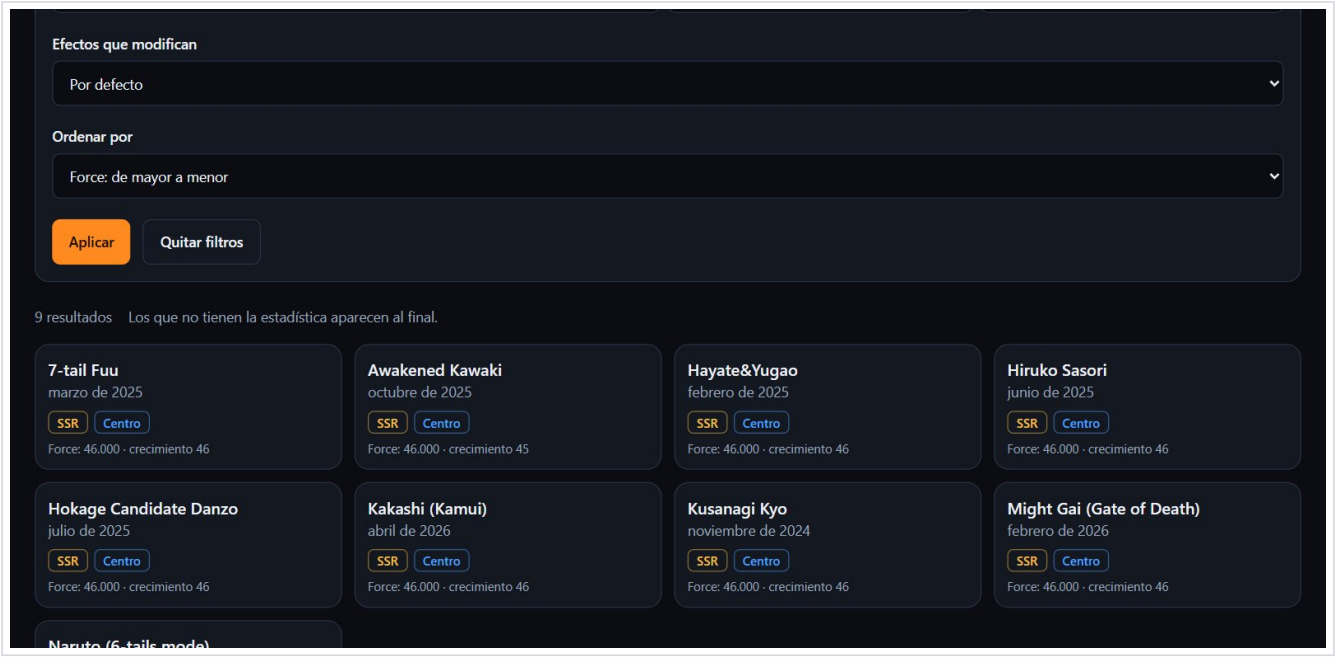

## How it is built

| Part | What it is |
|---|---|
| Hosting | Vercel, in your own team (FURIA NINJA). The code comes from the project repository, branch milestone-4 |
| Database | Neon PostgreSQL, a managed online database, on its free plan. A second, separate database serves test versions, so a test can never touch your live data |
| Cost | No new costs. No domain was bought |

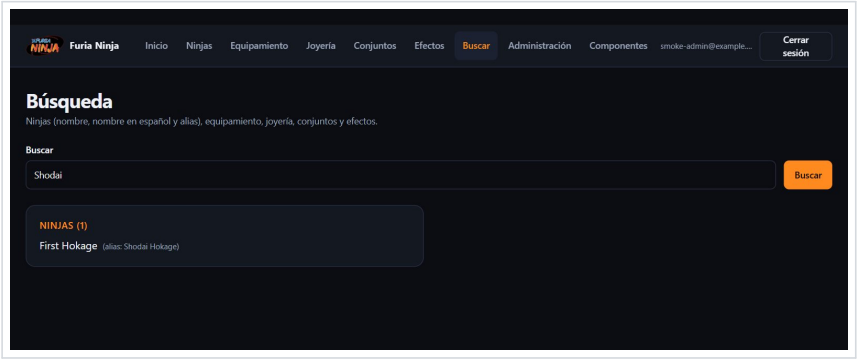

## Your earlier corrections, and how they are applied

| Your decision | What the application does |
|---|---|
| Each new awakening replaces the previous one | Applied to every talent and skill. The page says so, and the effects are never added together |
| Natsu Dragneel, Cursed Tayuya, Kusanagi Kyo, First Hokage, Hinata, Sage Jugo | Their special rules are kept exactly |
| Shodai Hokage is the First Hokage | One ninja, found by both names |
| Kimono Kurenai | Her Spanish text is complete, with the last line you sent |
| Center = Assaulter, 15 ranks, Power, Chakra, Force, S. Attack, English first | Applied and tested |
| Three cards print a five digit HP (Anko 45000, Hikari 46000, Isshiki 38000) | Kept exactly as printed until you confirm |

## Search and filters on the live site

Result of the filters rank SSR and Center formation, sorted by Force from highest to lowest. Nine results.

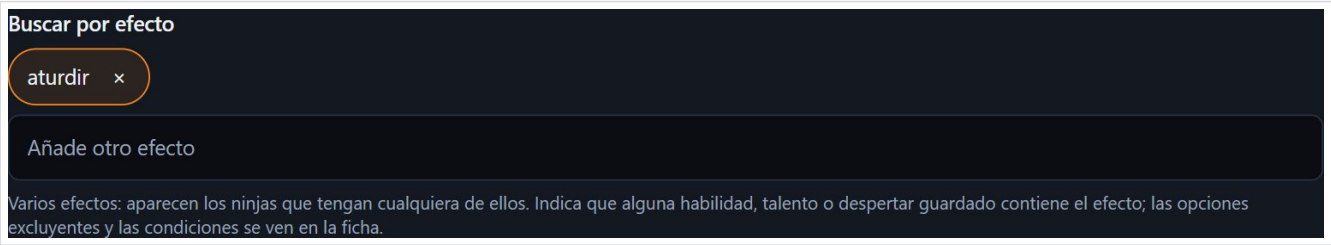

Searching Shodai finds First Hokage. The result shows which name matched.

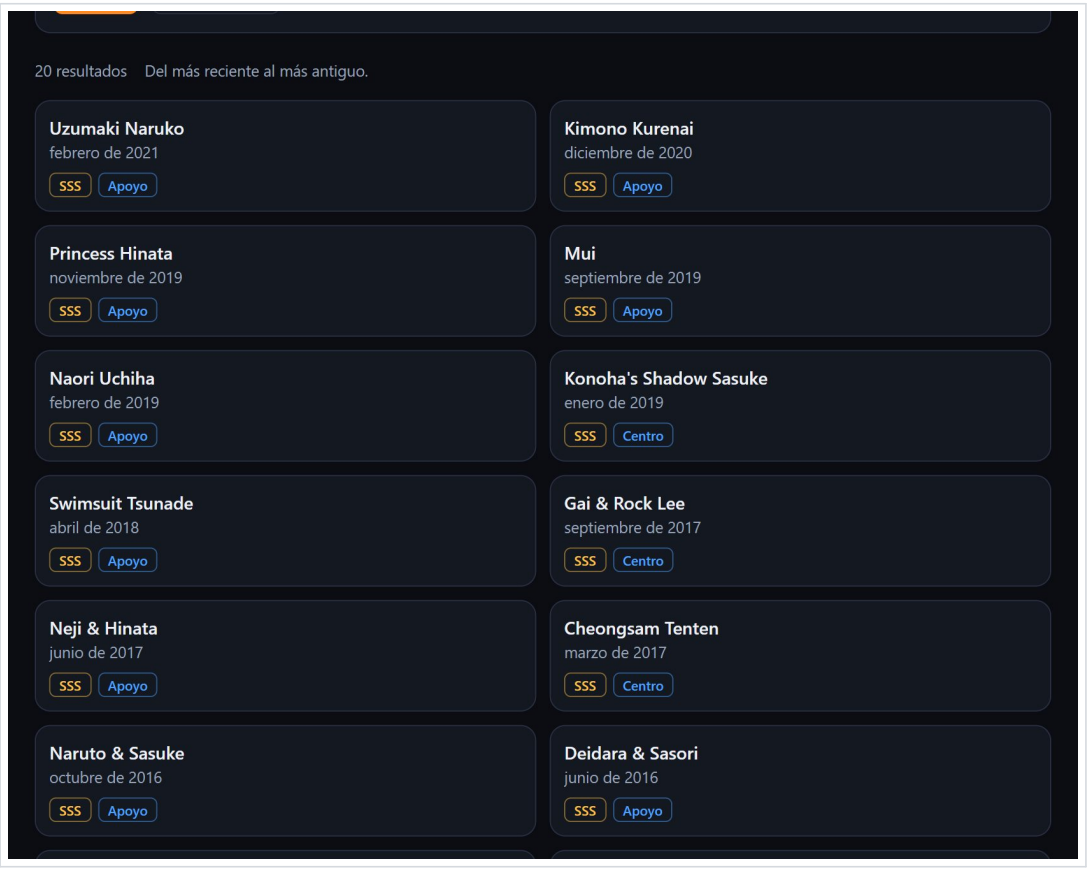

## New: search by effect

**Your request:** "I'd like the filters to also include the option to search for specific effects, rather than just statistics."

**What you get:** a field called **Buscar por efecto**, right under the name search on the Ninjas page. Type an effect, press Enter, and the list shows only the ninjas that have that effect among their stored skills, talents and awakenings. Suggestions appear while you type, and every chosen effect becomes a chip that you can remove with one tap.

The field with one chosen effect (aturdir) and the explanation under it. Live site, desktop.

Result of searching aturdir: 20 ninjas that stun. Every ninja appears once, with the usual rank and formation tags.

Several effects together mean **any of them**, the same rule as the other filters (for example rank A or rank B). Different filters are combined with AND. The terms stay in the web address, so a search can be shared and reloaded, and "Quitar filtros" clears them.

## How the effect search works

| Point | How it behaves |
|---|---|
| Where it looks | Normal and special skills, talents, talent awakenings, skill awakenings and other abilities |
| Structured effects | Matched by what is stored: the state (stun, seal, ...), the kind (heal, fury, removal of states, immunity), the statistic and whether it goes up or down, and who it affects |
| Effects stored only as text | Matched by their real wording, in English and in Spanish. Wording such as "cannot be stunned" or "immune to stun" is not counted as applying the effect |
| Language | Spanish and English give the same result. Capitals and accents do not matter: aturdir, Aturdimiento and stun find the same ninjas |
| Applying or immune | aturdir finds ninjas that stun. inmunidad a aturdir finds ninjas that are immune to stun. They are different searches |
| Effect or statistic | curación is the Heal effect. tasa de curación is the statistic of that name. They are never mixed |
| Who it affects | Add a word: aturdir enemigos, aturdir aliados, inmunidad a aturdir propia |
| What a result means | A stored skill, talent option or awakening of that ninja contains the effect. It does not say that all awakenings or all talent choices are active together. Conditions and choices are shown on the ninja page |

### Terms that work (checked on the real data)

| Type | Examples | Ninjas |
|---|---|---|
| State applied | aturdir / stun, sellar / seal, silenciar, congelar, aprisionar, petrificar, paralizar, cegar, encantar, caos | stun 20, seal 11, silence 11, freeze 20 |
| Immunity | inmunidad a aturdir / immune to stun, inmunidad a sellar, inmunidad (any) | stun 25, seal 7, any 164 |
| Statistic up or down | aumento de velocidad / speed increase, reducción de ataque / attack reduction, tasa de bloqueo, resistencia al control | speed up 165, attack down 93 |
| Damage reduction | reducción de daño / damage reduction | 25 |
| Heal | curación / heal | 64 |
| Fury | restaurar furia / fury restoration, reducir furia | restore 166, reduce 18 |
| Removal of states | eliminar debuffs / debuff removal, disipar buffs enemigos | debuffs 76, buffs 46 |

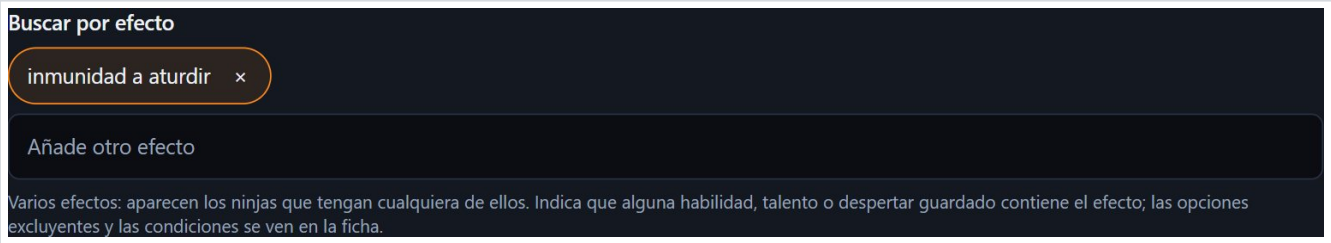

Any other word that the vocabulary does not know is searched inside the stored effect text, for example "reflejo".

### Limits to know

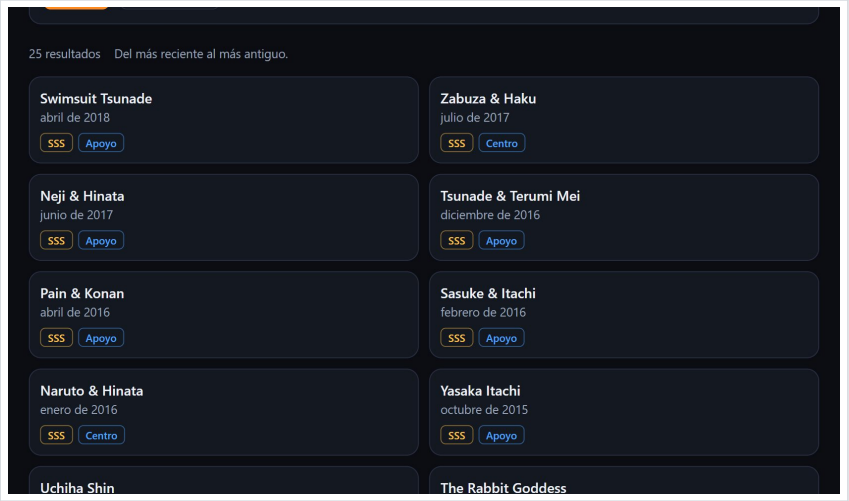

Names you have not translated yet stay in English in the suggestions. Unusual wording in text-only effects can be missed by the vocabulary, but typing the exact stored word still finds it. Effects missing from the source material cannot be found. Edits made by an administrator appear in the search within about 30 seconds.

## Immunity, and effect combined with statistics

Searching **inmunidad a aturdir** gives a different list from **aturdir**: 25 ninjas against 20.

The chip reads inmunidad a aturdir.

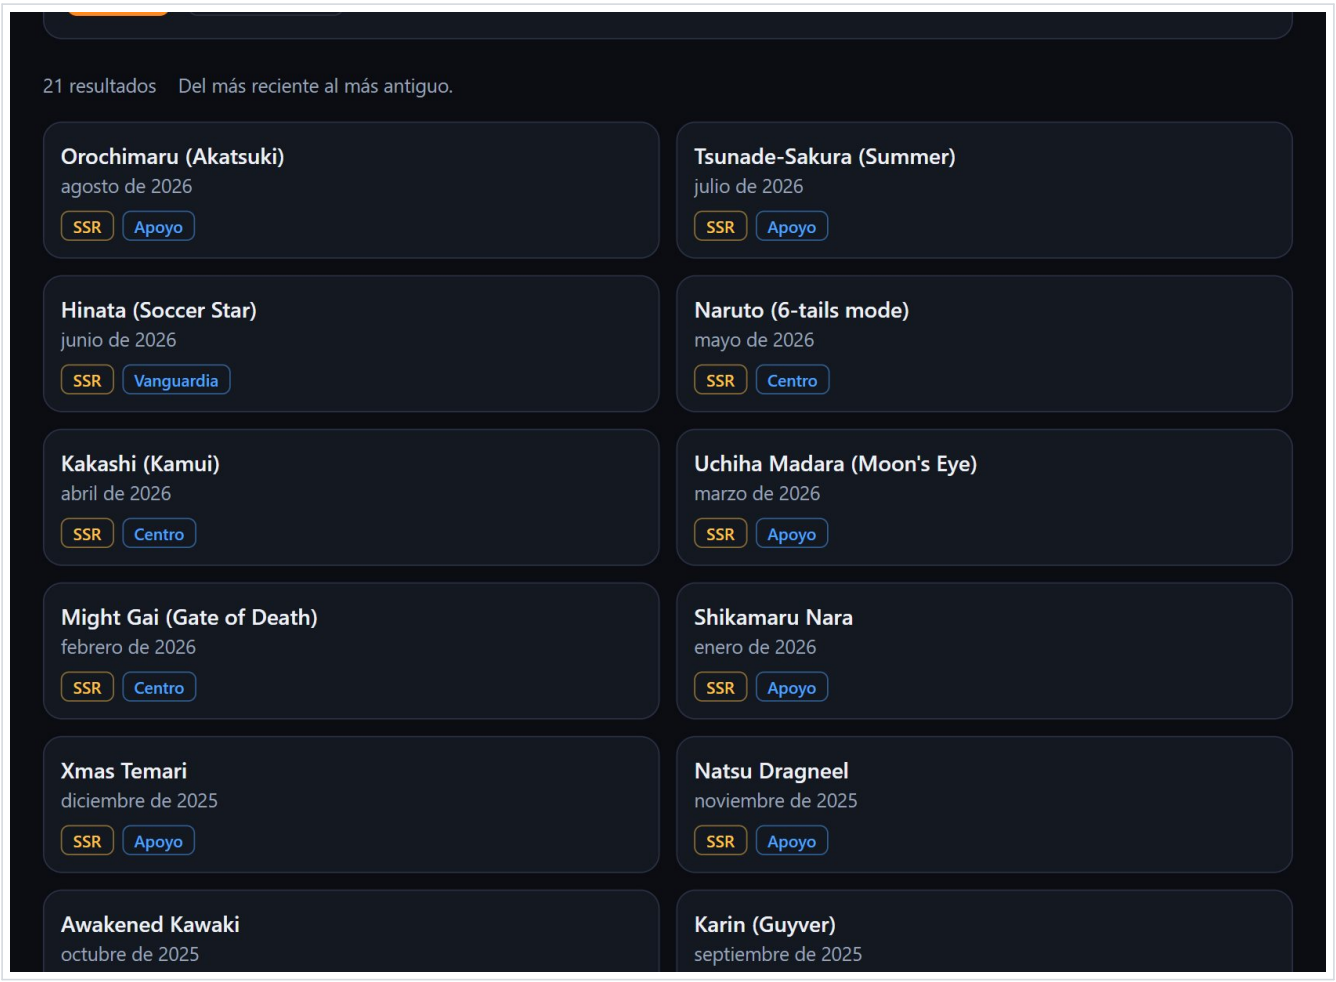

25 ninjas that are immune to stun, from the live site.

The effect filter works together with rank, formation, statistics and the other filters. Example from the live site: **aumento de velocidad** (165 ninjas), with **HP at least 100000** (132 ninjas), and rank **SSR**.

Filters set on the live site: effect aumento de velocidad, rank SSR, statistic HP with a minimum of 100000.

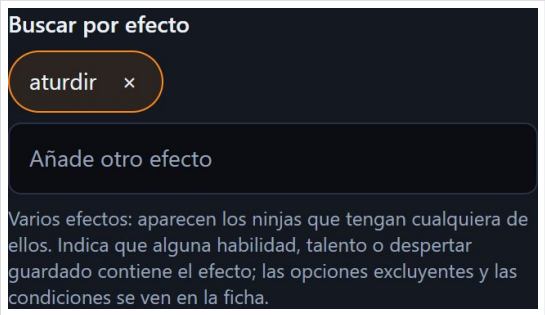

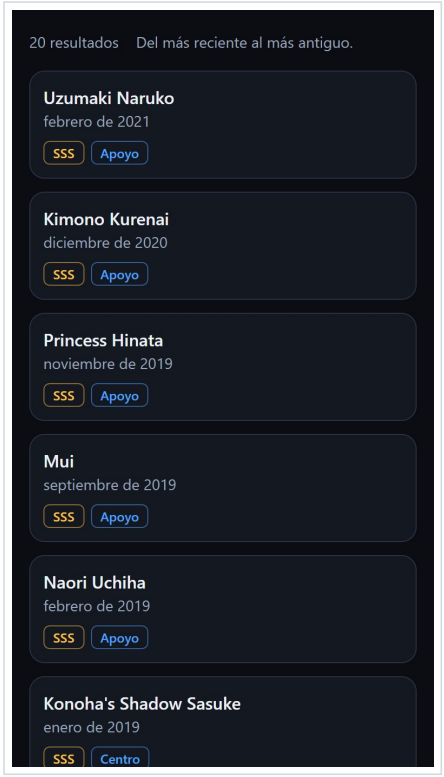

The combined result: ninjas that raise speed, have rank SSR and at least 100000 HP. Counts are exact and no ninja repeats across pages.

The older selector **Efectos que modifican** (statistic) stays as it was. It still finds ninjas whose effects change a chosen statistic; the new field finds a specific effect.

## On a phone

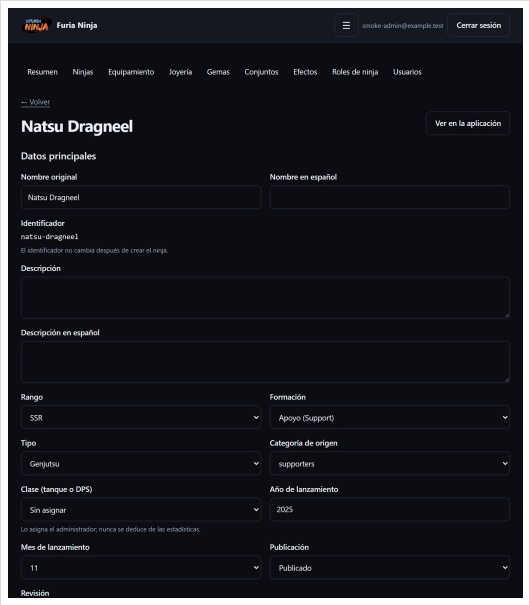

At 390 px width the field fits the screen, the chip can be removed with a large target, and nothing scrolls sideways. The suggestions list opens with the keyboard, and Enter applies the search.

Left: the effect field on a phone. Right: the results of aturdir on a phone. Live site.

### Earlier checked pages

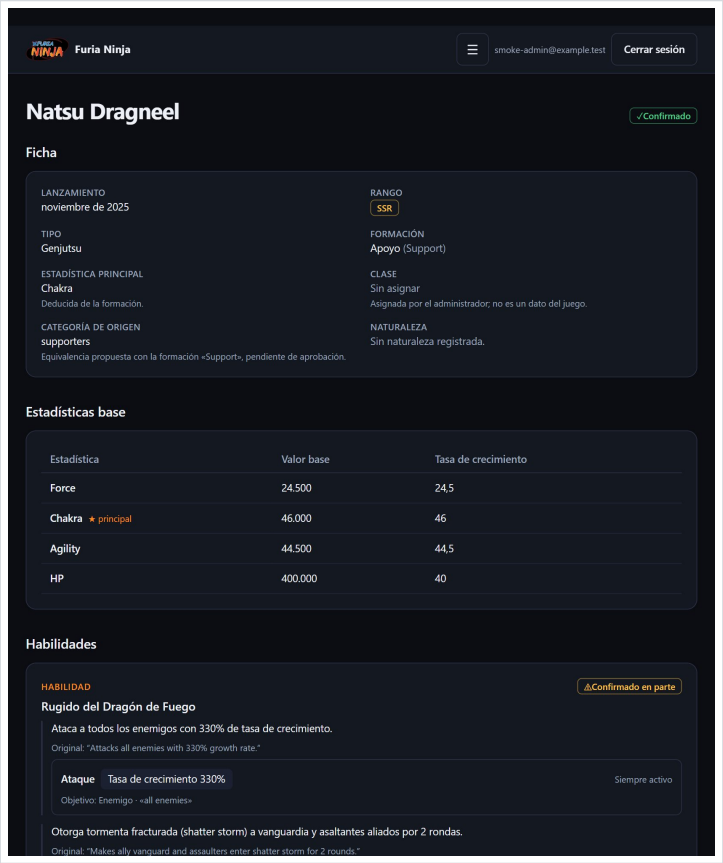

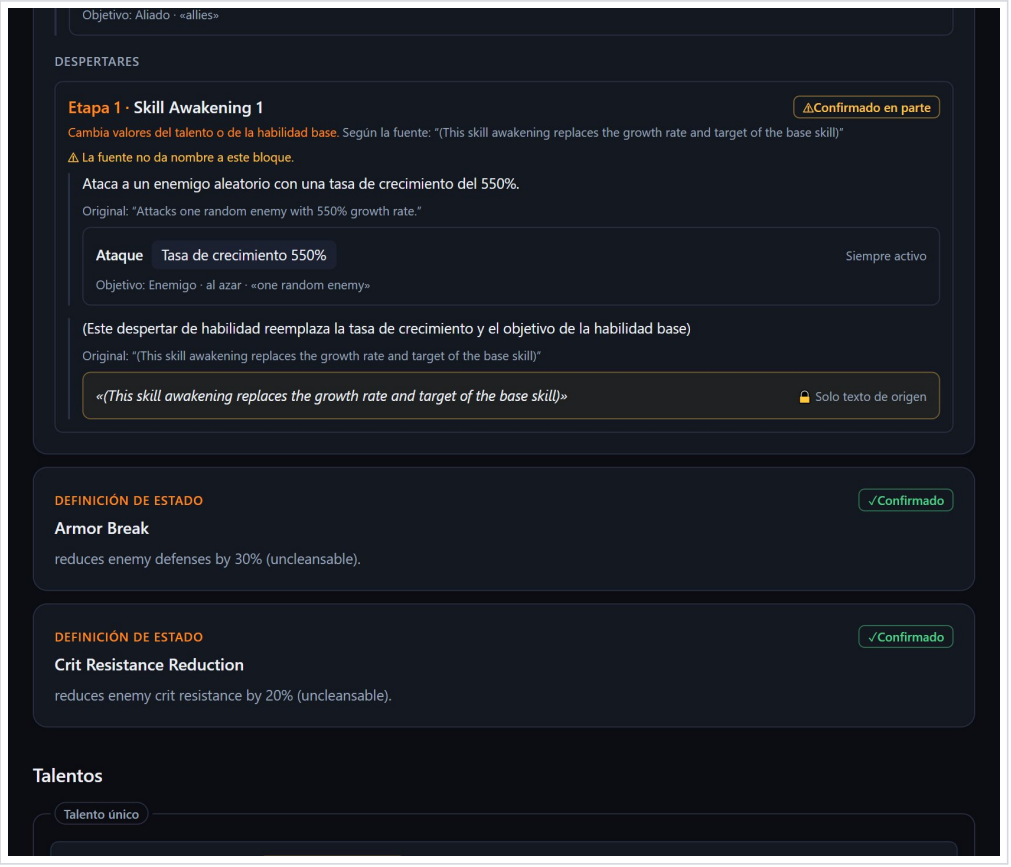

Left: the administrator edit page. Right: Natsu Dragneel on a phone.

## Cards and awakenings (unchanged, re-checked live)

Natsu Dragneel: card, base skill and talent, with the original line next to each effect.

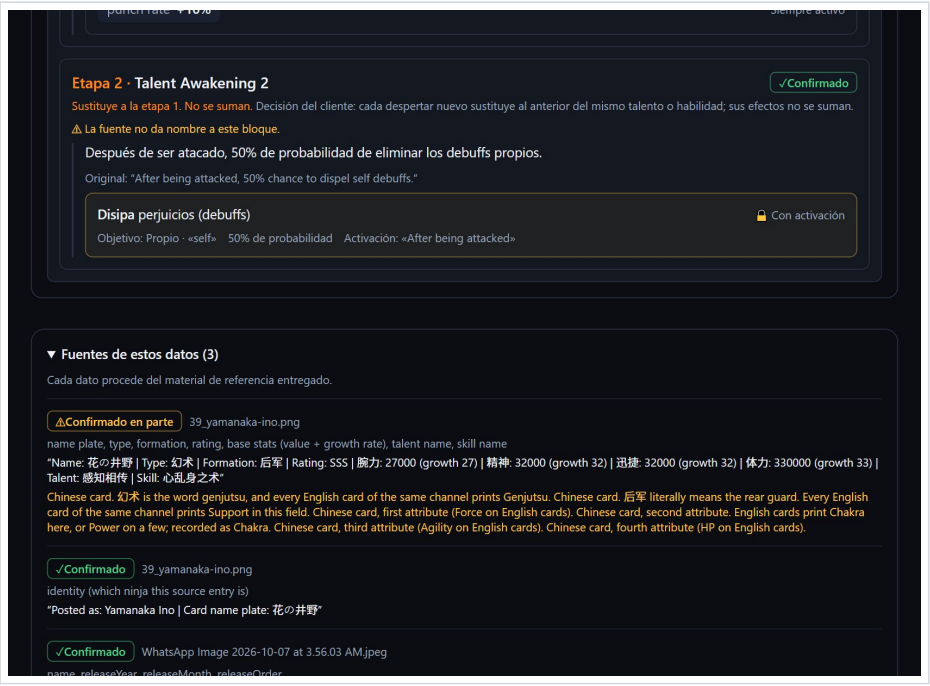

Skill awakening of Natsu: it replaces the target and growth rate of the base skill and nothing else (one random enemy at 550%).

Cursed Tayuya: the special awakening replaces the values it restates (speed 88% to 92%).

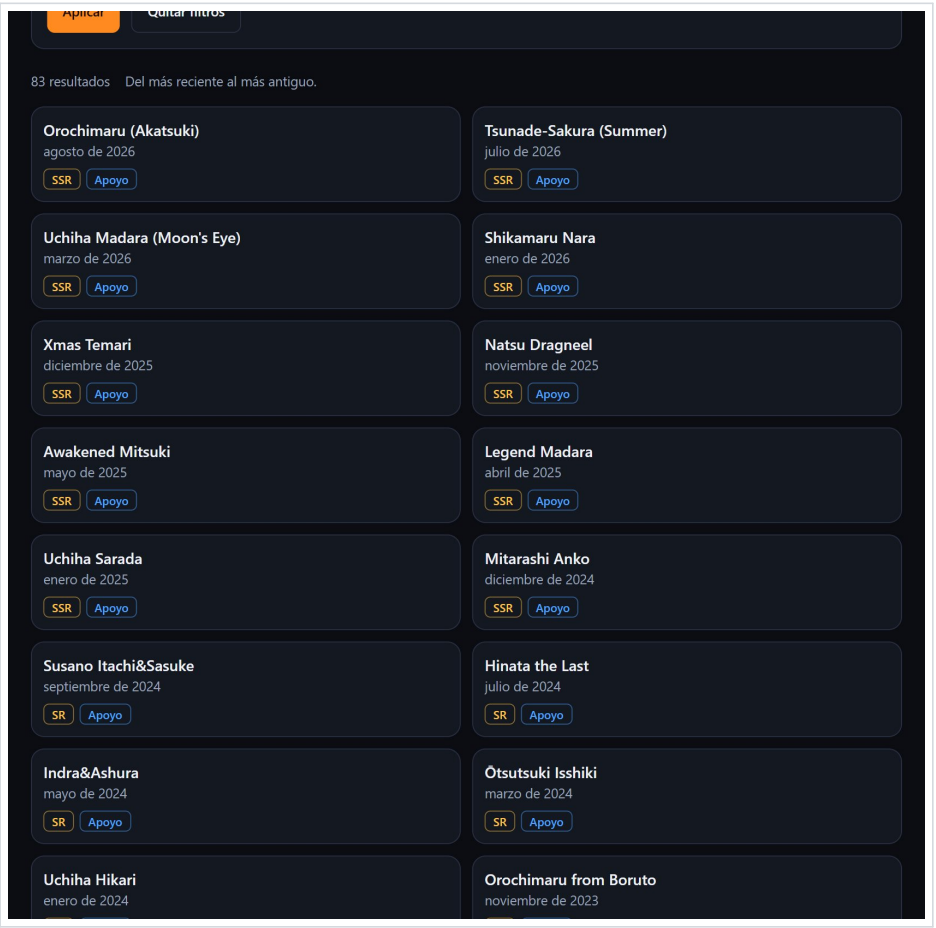

Kimono Kurenai: the three choices stay alternatives, and the Spanish text ends with the line you sent.

Yamanaka Ino, awakening 2: it replaces awakening 1 because of your decision. The page states the rule and its reason.

## The Supporters

The Support formation lists 83 ninjas: the 79 Supporters plus 4 Alien cards that also print Support.

The Supporters in the ninja list.

## How this release was checked and published

| Step | Result |
|---|---|
| Automated tests | 291 tests on the local database format (290 pass, 1 skipped by design) and 291 on PostgreSQL (281 pass, 10 skipped because they only apply to the local format). None failed. 17 are new and cover this search: Spanish and English, accents, synonyms, text-only effects, talents, skills and awakenings, immunity, choices, combined filters, paging, empty results and the real 177 ninjas |
| Real browser, before publishing | 183 of 183 checks passed on a test version that uses its own database: desktop, 390 px phone, keyboard use, chips, clearing, paging and results compared with the database |
| Safety copy | A complete backup of the live database was taken and verified before the release (41 tables, 9,077 rows) |
| Publishing | Test version first, then the live site. The code version is recorded: commit e812303 on branch milestone-4 |
| Live website checks | 47 of 47 checks passed: secure connection, sign-in, access rules, the new search compared with the database, combined filters, paging, phone width. The temporary test accounts were removed and no game data changed |
| Your data | Nothing was reset, reloaded or overwritten. After the release all 41 tables are identical to the backup: 177 ninjas, 316 abilities, 4,395 effects, your administrator account |
| Security | Sign-in, roles and the administration were tested again on the live site. The one-time setup page is closed and the setup key was removed. No password or key appears in this report or in the code |
| Logs | No errors in the test version or the live site after the release |

Release note: one publishing command ran twice, which created a second identical copy of the same version. It has no effect on the site.

## What is still open

| Item | What we need |
|---|---|
| Equipment, jewelry and gems | Your source material. Nothing was invented |
| Cards for Might Guy and Sasuke (Taka) | The two cards |
| Spanish for Guren, Final Sasuke and the end of Sai's text | The Spanish text or screenshots |
| Nagato Uzumaki | The screenshots for its rating and position |
| Spanish names for a few effects | Some effect and statistic names are still English in the data. Send the Spanish names you prefer and they will be added to the search |

### Questions for you

| # | Question |
|---|---|
| 1 | Illusion God Itachi is the same character as which ninja? |
| 2 | Who are Neji Hyuga (old entry) and Immortal Madara? |
| 3 | Are the six name matches right? (listed in the earlier reports) |
| 4 | Are the HP values 45000, 46000 and 38000 correct, or is a digit missing? |
| 5 | Shikamaru Nara: Explosive Shadow Stab (card) or Shadow Fang (text)? |
| 6 | Does a first awakening add to the base talent or skill, or replace part of it? |

### Handover

You receive the source code (the project repository), the reports of every milestone, a handover guide with the commands to run, back up and update the site, and the data audit files. Private material such as your card screenshots is not part of the website and is not online.

## Final review and acceptance

| Review item | Reviewed | Comments |
|---|---|---|
| The live website opens and works | | |
| Your corrections are applied | | |
| Search, filters and sorting | | |
| Search by effect (Buscar por efecto) | | |
| Administration and accounts | | |
| Phone and tablet layout | | |
| Spanish interface and content | | |
