Furia Ninja

Equipment and jewelry add-on: the catalogue is live

Delivered for your review. This add-on is separate from Milestone 4 and is not accepted or closed until you have reviewed it and said so.

Where to find it

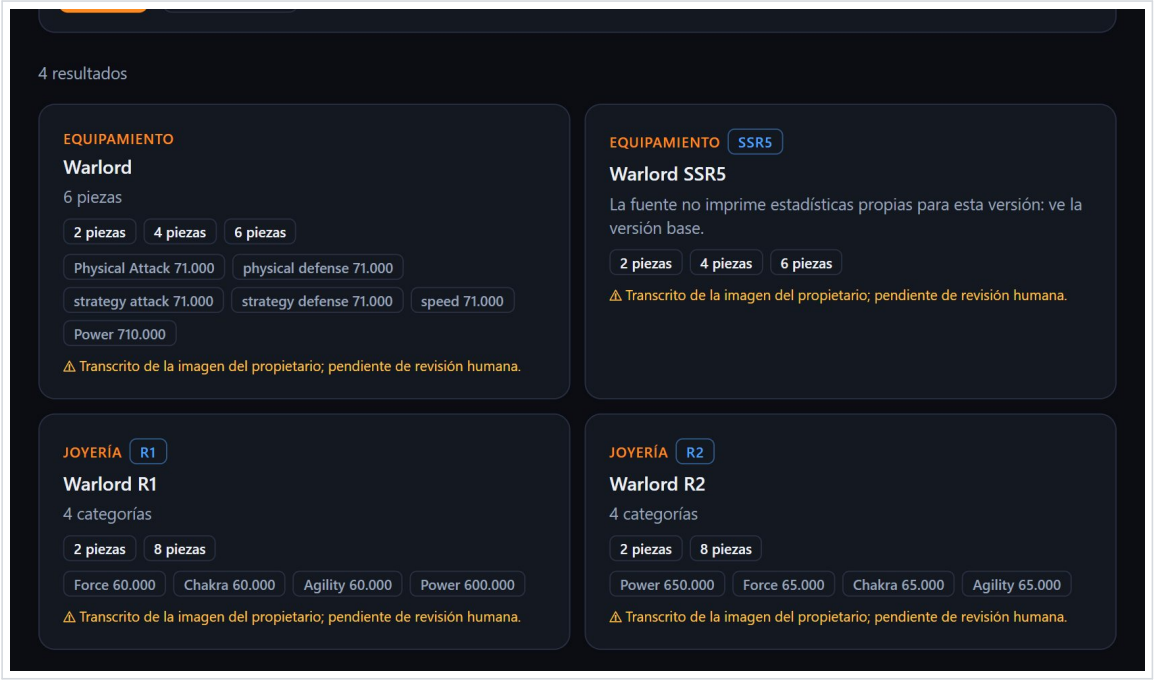

The new section is online at **https://furia-ninja.vercel.app**, under **Equipamiento**, **Joyería** and **Conjuntos** in the menu. It is private like the rest of the site. Every screenshot in this report was taken from the live website.

What	Where it stands
Sets from your images	71 named sets. 68 have images and are in the catalogue. Legendary, Fate and Totsuka have a name only, so nothing was made up for them
Images	All 143 images are accounted for, each linked to the set version it was read for
Versions	78 equipment versions and 63 jewelry versions. Each version has its own numbers and its own bonuses
Equipment	Six printed statistics per version and the bonuses at 2, 4 and 6 pieces, as printed
Jewelry	Four categories (Force, Chakra, Agility, Power), the 2 piece effect of each category and the shared 8 piece effect, as printed
New filter switch	Match Any or Match All for several effects, on ninjas, equipment and jewelry
Your ninja data	Not changed: 177 ninjas, 316 abilities, 4,395 effects and all accounts are exactly as before
Checking status	The values were typed from your images and carry the note «pendiente de revisión» until a person confirms them against the images

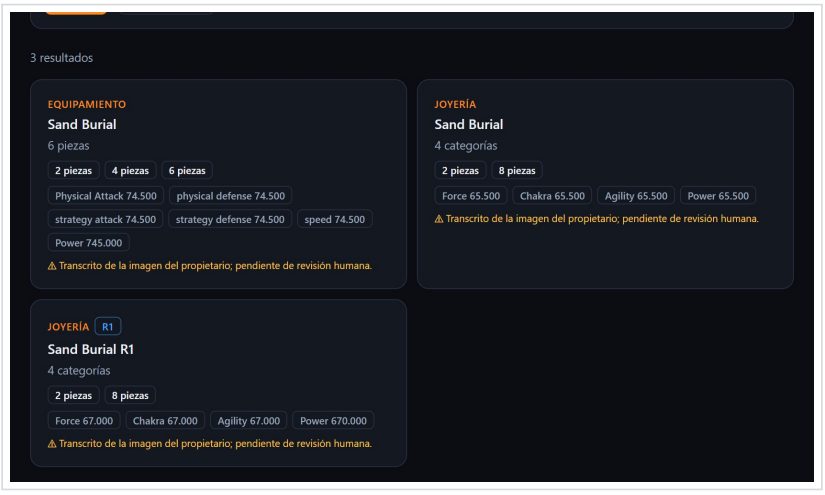

Equipment and jewelry stay two separate categories, linked by the set name. A missing jewelry sheet does not mean the game has no jewelry for that set: 16 sets have equipment images only.

Versions are kept apart

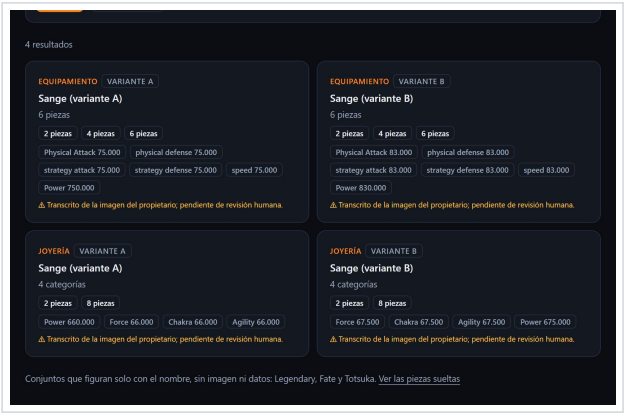

The rule you gave was followed exactly: R1 or R2 is added to the name only where your images or you said so. Everything else keeps its own card and its own numbers. Nothing is shown as worn together with another version.

Warlord: equipment Base and SSR5 (both printed on your sheet), jewelry R1 and R2 (printed). SSR5 is not called R2, and no base jewelry was invented. SSR5 shows no pieces of its own because the sheet prints the statistics once.

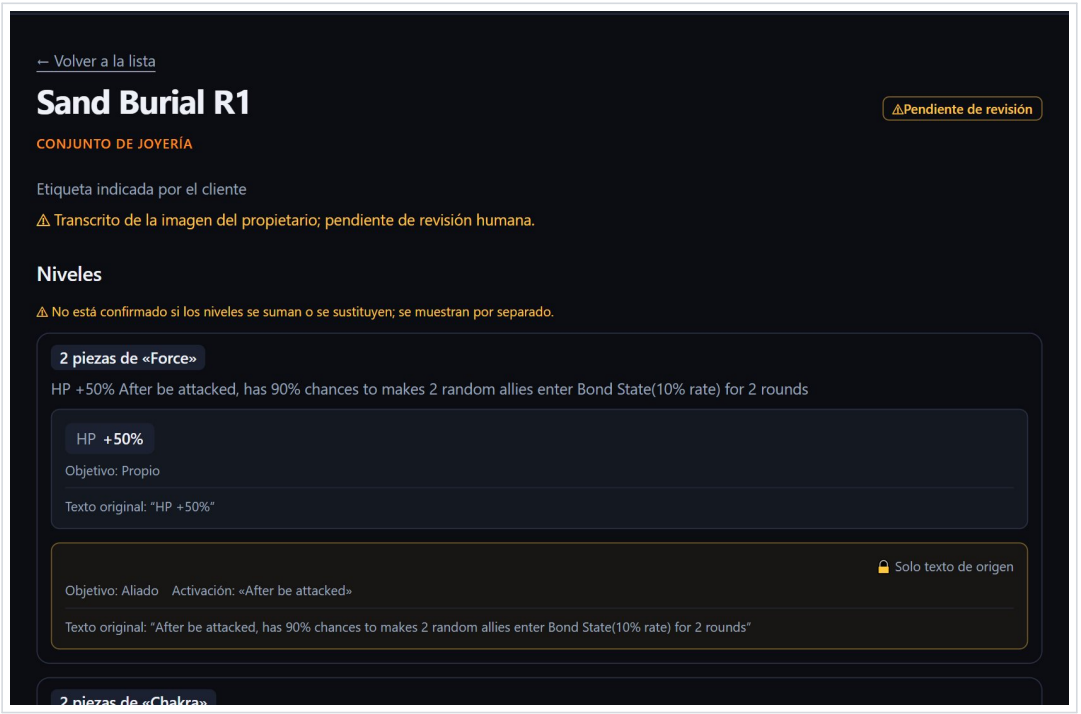

Sand Burial: one equipment set, the base jewelry and the R1 jewelry (the R1 label is the one you named).

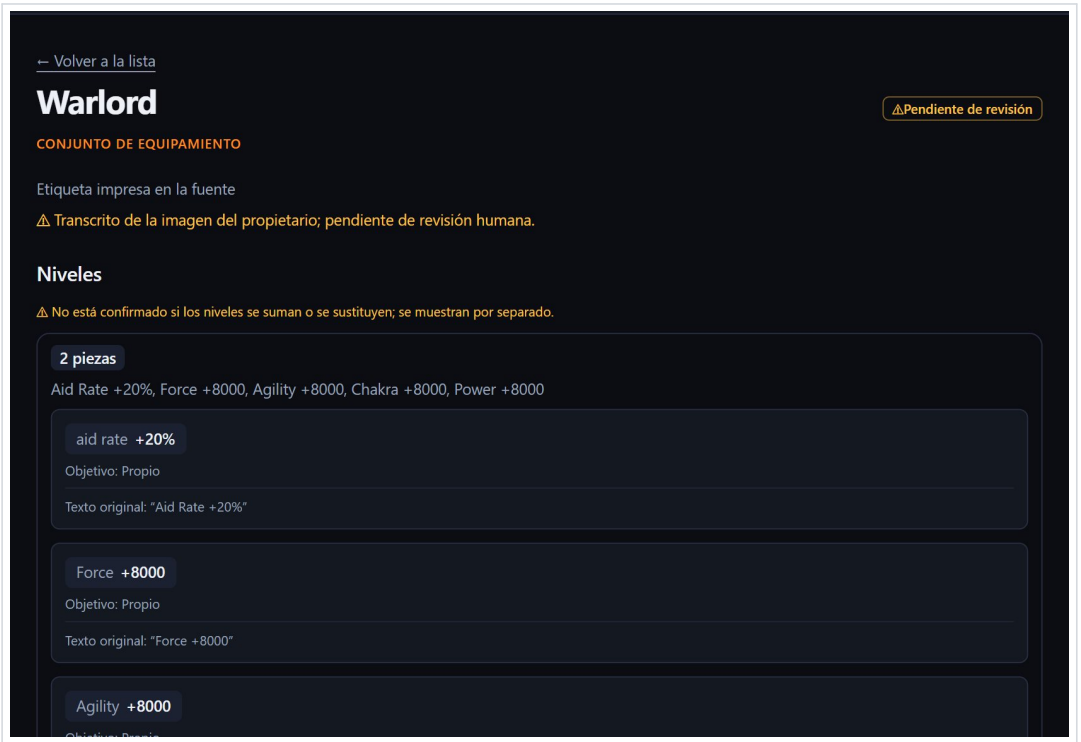

Sange: two equipment sheets and two jewelry sheets with no label in your images. They are shown as «variante A» and «variante B», never as R1 or R2.

Set pages

Each page shows the version, where the label comes from, the other versions of the same set, every bonus at its piece count with your original wording next to the effect, and the names of the source sheets (the images themselves are private and are not published). Warlord also lists the upgrade costs, clearly as costs and not as bonuses.

Sand Burial R1 jewelry. The 2 piece effect names its category, and no tier is labelled as always active.

Warlord equipment, bonus at 2 pieces, each effect with the printed text.

Match Any or Match All

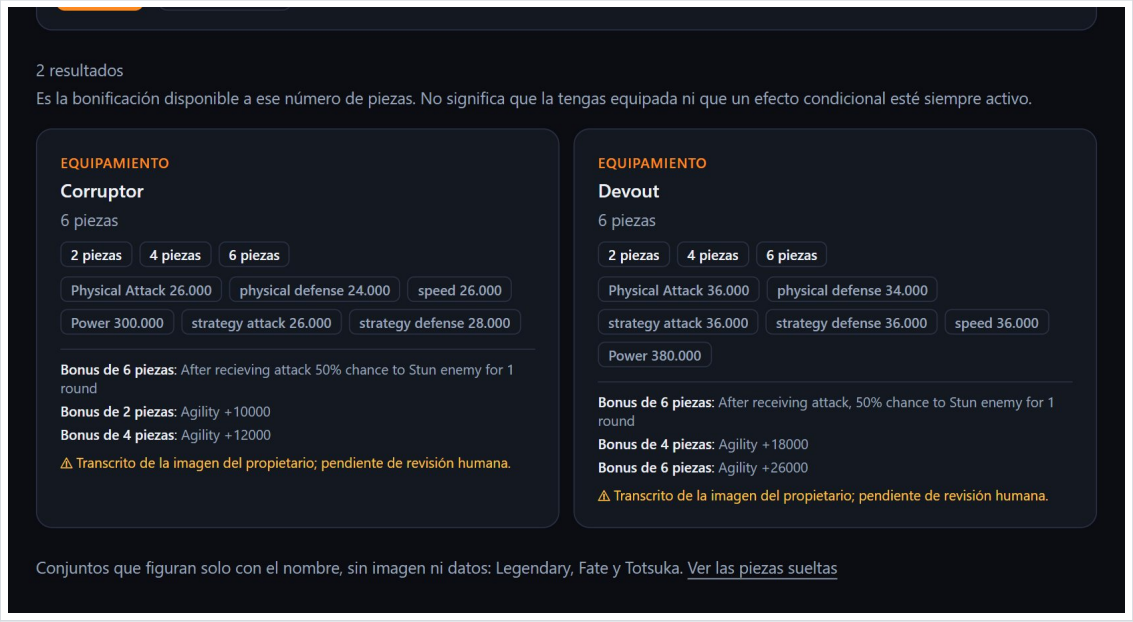

You asked for several effects to be matched either way. The filter now has a switch under the effect field:

Mode	What it shows
Coincidir con cualquiera (Any, the default)	Everything that has at least one of the chosen effects
Coincidir con todos (All)	Only what has every chosen effect. The effects can sit in different bonuses, categories, abilities or awakenings; they do not need to be in the same line

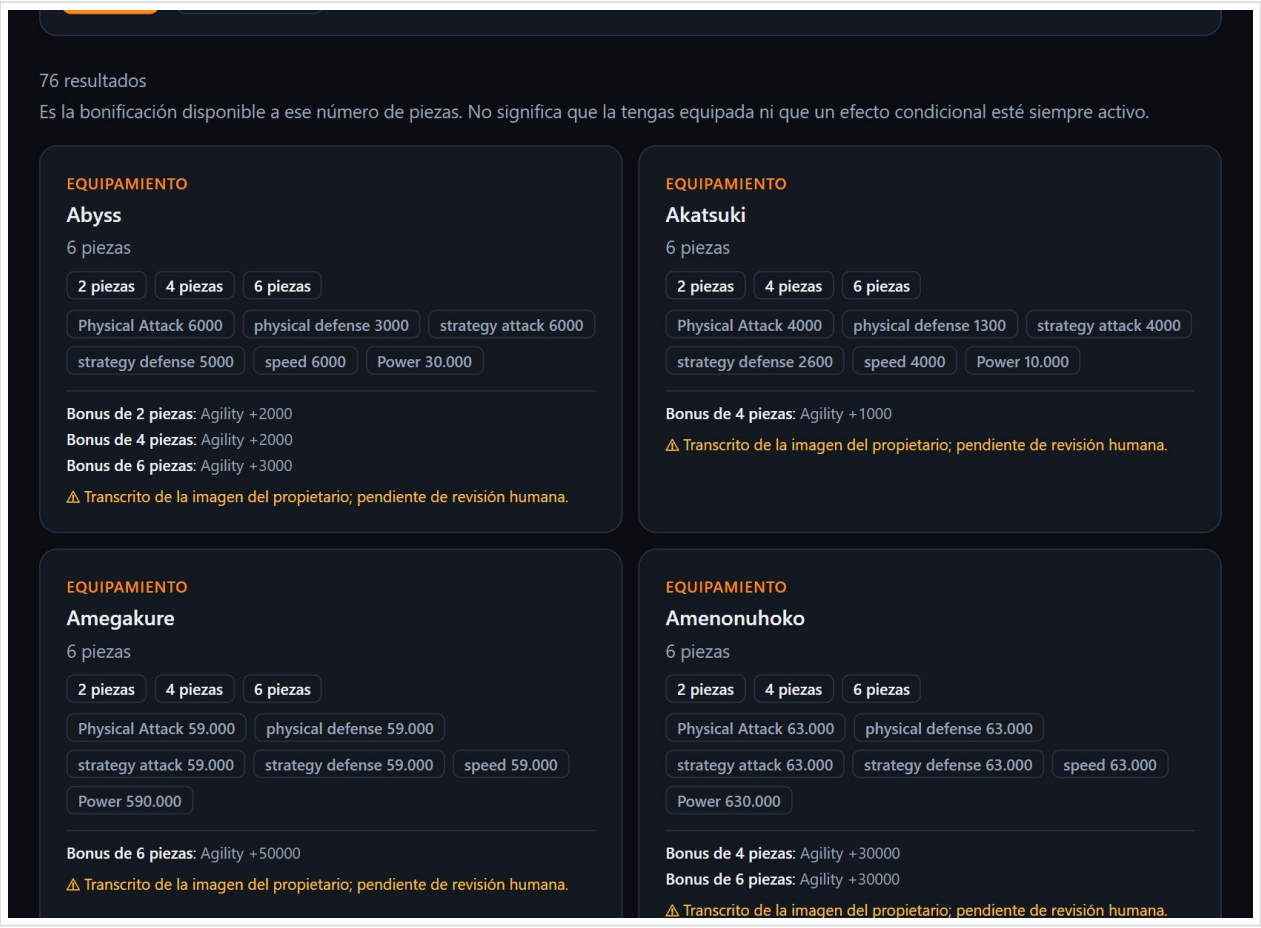

The mode is kept in the web address together with the chosen effects, so it survives page changes, sorting, reloads, removing a single effect and «Quitar filtros» (which clears the effects but keeps your chosen mode). Choosing the same effect twice, or in English and Spanish, counts once. The page always says which mode is on.

Equipment with two effects chosen (aturdir and aumento de agilidad) and Match All selected.

Match All result: the two sets whose bonuses contain both effects. Each card says which piece count holds the effect and that it does not mean the set is equipped.

The same two effects with Match Any: every set that has at least one of them (76 sets, because Agility bonuses are common).

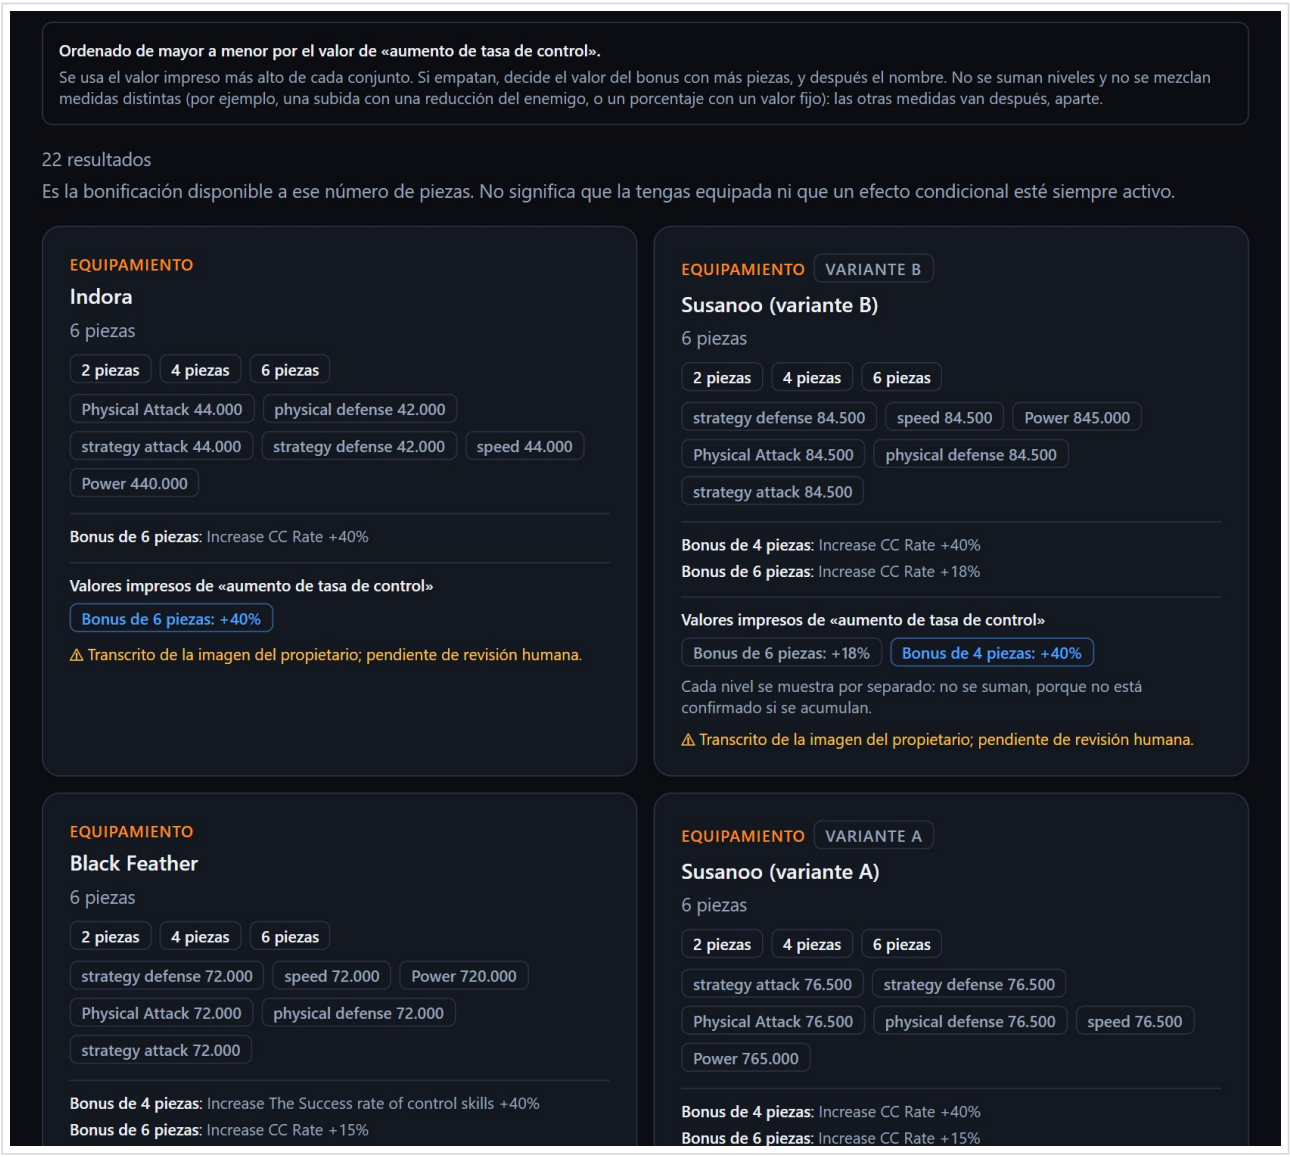

Checked on the live site with real numbers: for ninjas, equipment and jewelry, the Match All count equals the count of the first effect plus the second minus the Match Any count, and is never larger than Match Any. On equipment the first effect finds 2 sets, the second 76, Any 76 and All 2.

Meaning is kept: inflicting stun is not the same as immunity to stun, the heal effect is not the healing rate statistic, wording such as «cannot be stunned» is not counted as stunning, and the target (ally, enemy, self) is kept. A result means the set has that bonus at that piece count; it does not say the bonus is active or that the pieces are worn.

Sorting by the value of an effect

Your request: "When you search, for example, for control rate, there's no way to sort the results from highest to lowest. I know which item has the most in the entire game, and I'd like it to appear at the very top, followed by the next one, and so on."

Once an effect is chosen, the list **Ordenar por** offers **Valor del efecto elegido: de mayor a menor** and **de menor a mayor**. It works on Equipamiento, Joyería, Conjuntos and Ninjas. Below, the live site searching **aumento de tasa de control** (control rate increase), highest first: Indora, with +40% at 6 pieces, is at the very top.

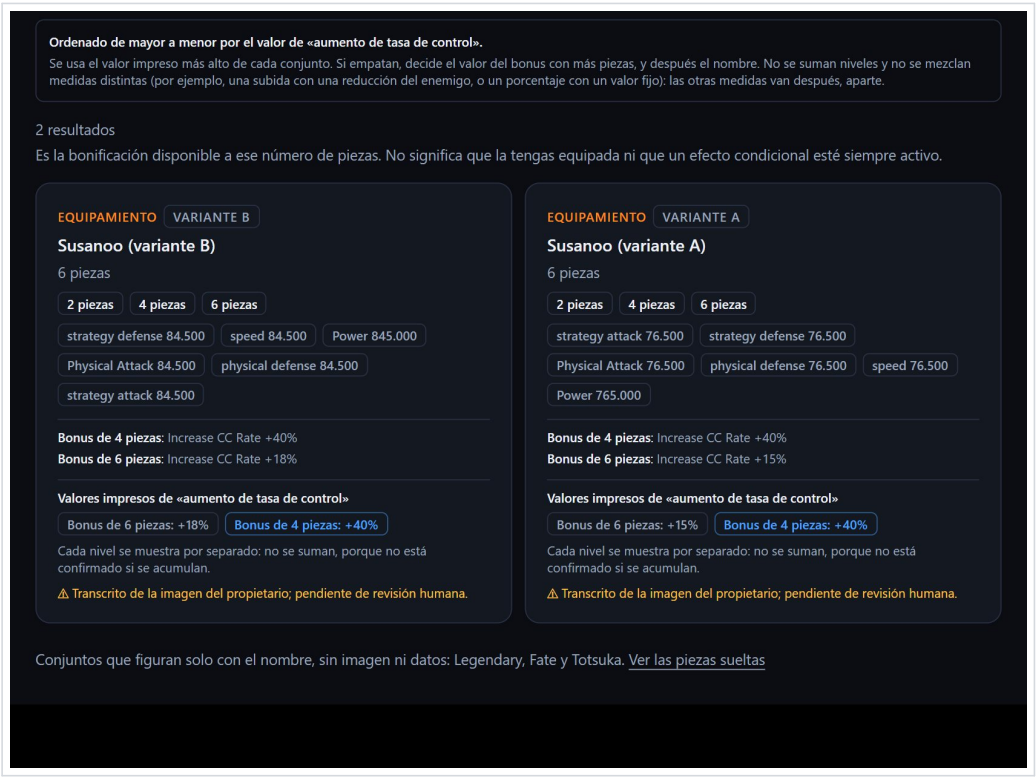

Control Rate increase, highest to lowest, on the live site. Each card shows the printed values it was ranked by, at their own piece counts.

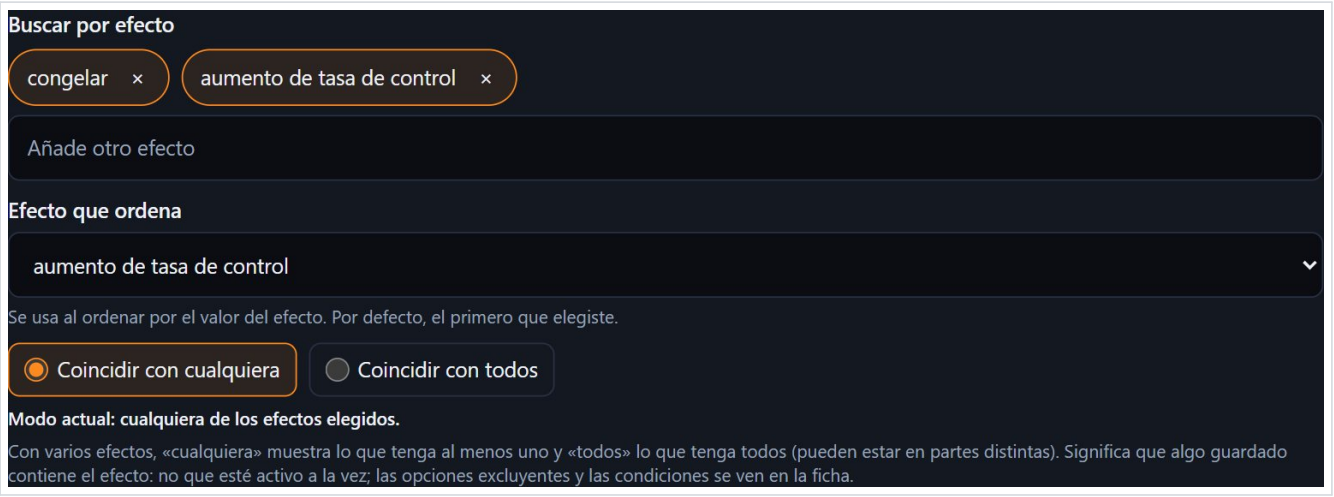

How the order is decided

Rule	What it means
Only the chosen effect	The order uses the value of the effect you selected, never a different statistic or a total score
Highest printed value	Each set is ranked by the largest value that effect is printed with. Tiers are not added together, because it is not confirmed that they accumulate
Ties	If two sets print the same best value, the value at the higher piece count decides, then the next lower one, then the name (A to Z)
Different measures stay apart	An increase of control rate is not compared with a reduction of the enemy's control rate, with a flat number, or with another effect. The other measures come after, grouped and labelled
No number, no guess	Effects that exist only as your original wording, or that have no amount (a state, a heal), are still found but come after the numbers and say so
Several effects	A box «Efecto que ordena» chooses which selected effect decides. By default it is the first one. Match Any and Match All still decide what is listed

Your Susanoo example. Both versions print Increase CC Rate +40% at 4 pieces. At 6 pieces one prints +15% and the other +18%. The +18% version comes first when sorting from highest to lowest, and last from lowest to highest. The value used is 40%, not a sum.

Susanoo on the live site: variant B (+18% at 6 pieces) before variant A (+15%). Each tier is shown on its own.

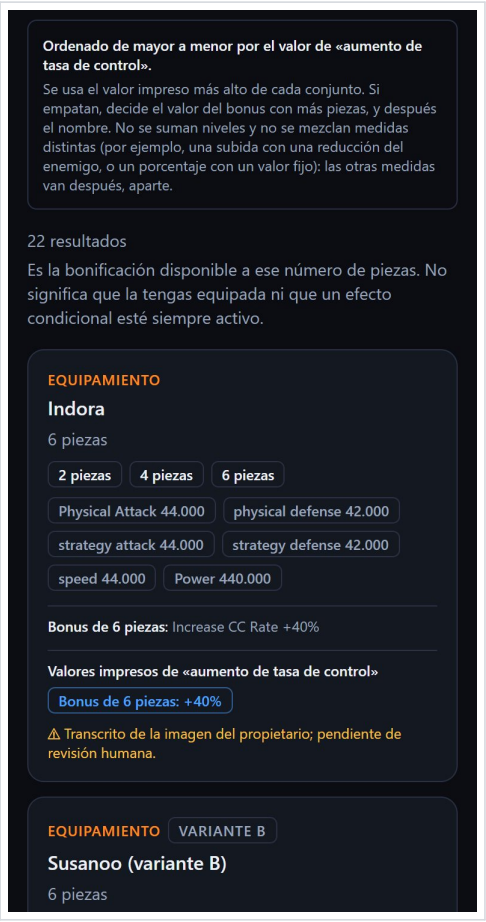

Two effects chosen (congelar and aumento de tasa de control). The box «Efecto que ordena» says which one decides the order.

The same sorting on Joyería. The value belongs to the 2 piece or 8 piece bonus where it is printed.

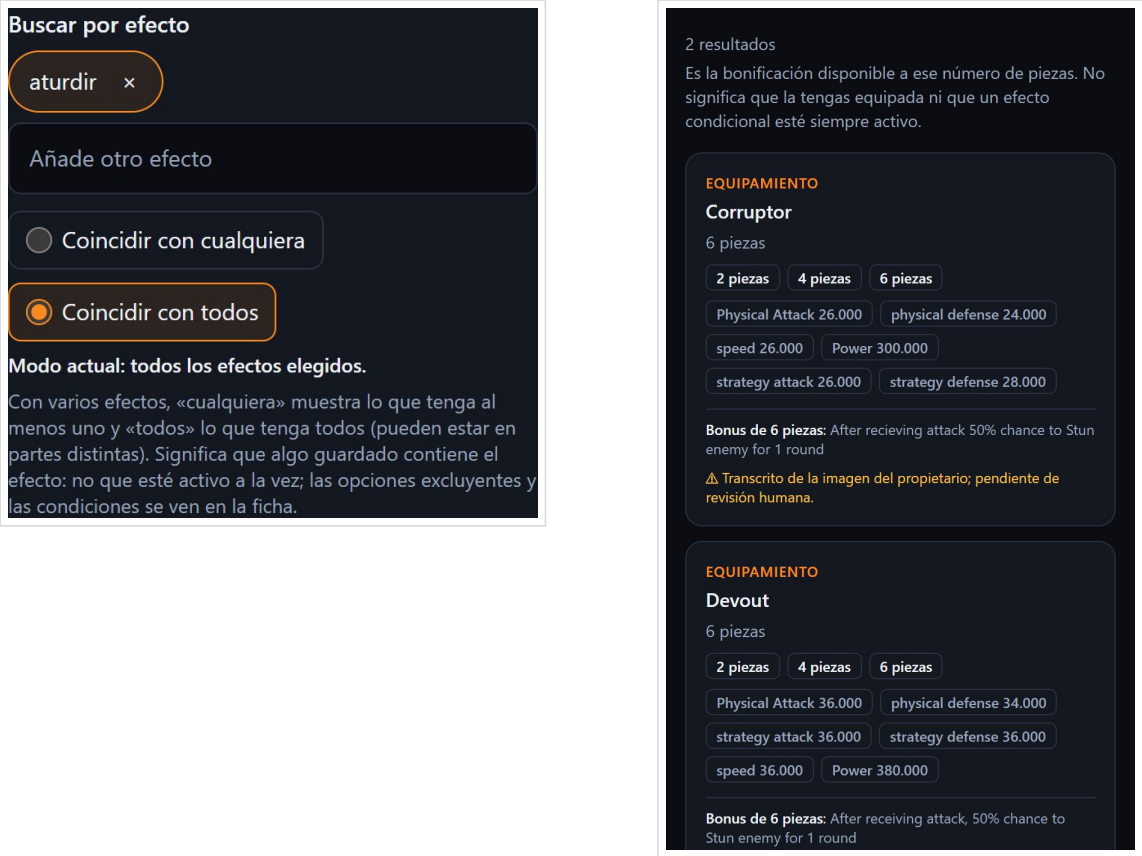

Lowest to highest.

On a phone (390 px): the same order, nothing scrolls sideways.

On a phone

At 390 px width nothing scrolls sideways, the Match Any and Match All choices are large enough to tap, and the filter can be used with the keyboard.

Left: the effect field with Match All on a phone. Right: the results. Live site.

Other filters in the catalogue

Filter	How it works
Search	Set name, with or without accents or capitals, the printed title (MEKA) and the version (R1, SSR5)
Category	Equipment, jewelry or both
Version	Base or only version, labelled (R1, R2, SSR5), or unlabeled variants
Bonus at	Sets that have a bonus at 2, 4, 6 or 8 pieces
Printed statistic	A minimum and maximum on a statistic printed on the sheet, for example Speed at least 70000
Sort and pages	By name or by a printed statistic; paging never repeats or drops a set

How reliable the data is, and what we need from you

Every value was typed from your images. The first 12 sets and one more sheet were read a second time with no difference. The other sheets have been read once. Until a person has compared each set with its image, every card says «pendiente de revisión»; nothing is marked as verified. About 15 percent of the effect lines are kept as your original wording only (mostly «After released a skill...» sentences). They can be found by their words and are not turned into invented rules.

Questions for you

Set	Question
Sange, Iron Will, Crystalys, Susanoo, Truth-Seeking, Yin-Yang	The second equipment and jewelry sheets have larger numbers but no label. What are they called in the game?
Izanami	Three equipment sheets and two jewelry sheets without labels. Names, and which jewelry goes with which equipment?
Summoning	Two equipment sheets but one jewelry sheet. Is there a second jewelry version?
Sarutobi, Kumogakure	Each has two jewelry sheets. Are they two versions? (Kumogakure differs only in «Strategy ATK rate» against «Physical ATK rate».)
Mekansm	Your list says Mekansm and the sheets say MEKA. Which name is official?
Unusual printed values	Uzumaki «Punch Rate -40%» and «110% chance», Kirigakure «Weekend enemies' ATK», Longen «Reduce enemy ATK -20%», Butterfly «Attack +13», Sakura «(dot-120%)», Yaksa very high values, Sand Burial base Power 65500, Warlord SSR5 main statistics
Legendary, Fate, Totsuka	Please send the sheets if they exist

How this was checked and published

Step	Result
Automated tests	347 tests pass on the local database format (1 skipped by design) and 331 pass on PostgreSQL (17 skipped because they only apply to the local format). None failed. 57 are new in this add-on: the readings, the versions, the filters, Match Any and Match All, and the sorting by value
Real browser, before publishing	235 of 235 checks passed on a production build: desktop, 390 px phone, keyboard, paging, back and forward, clearing, the sorting by value and results compared with the stored data
Test database	The whole import ran on a separate test database first, twice, and the second run changed nothing. The same version was then tested against that database
Safety copy	A complete backup of the live database was taken and verified before any change (41 tables, 9,084 rows)
Publishing	The data was added earlier with one new table and a few empty columns. The sorting release changed no data and no table: only the website code
Your data	Every row that existed before is still there and unchanged: 177 ninjas, 316 abilities, 4,395 effects and all accounts
Live website checks	93 of 93 checks passed over a secure connection: sign-in, access rules, the new catalogue compared with the stored data, Match Any and Match All, the sorting by value (largest Control Rate first, never rising, ascending never falling, Susanoo, paging, back, forward and reload), mobile width. The temporary test accounts were removed and no game data changed
Privacy	Your original images are not in the website, not in the code repository and not served: the address of an image answers «not found»
Logs	No errors after the release

One limit to be open about: the temporary test copy of the website that is built on every update was built successfully, but it is behind a login of its own and could not be opened without creating a special access key on your project, which was not done. The sorting release was instead tested on a local PostgreSQL copy holding the full catalogue.
This add-on is not accepted or closed until you say so.
